Auditor General

October 7, 1987

P-722

Honorable Art Agnos, Chairman  
Members, Joint Legislative  
Audit Committee  
State Capitol, Room 3151  
Sacramento, California 95814

Dear Mr. Chairman and Members:

The Office of the Auditor General presents its report concerning first-year admissions of Asians and Caucasians at the University of California at Berkeley.

Respectfully submitted,

A handwritten signature in cursive script that reads "Thomas W. Hayes".

THOMAS W. HAYES  
Auditor General

## SUMMARY

---

### RESULTS IN BRIEF

From 1981 through 1987, it became increasingly difficult for both Asian and Caucasian first-year undergraduate applicants to the University of California at Berkeley (Berkeley) to gain admission to one of Berkeley's five colleges. Some of the reasons for this increased difficulty in gaining admission are listed below, as well as some of the consequences:

- From 1981 through 1987, the number of Asian and Caucasian applicants to Berkeley increased from 6,728 to 16,318, while the average number of enrollment spaces available was approximately 3,600;
- During this period, as indicated by the score derived from the combined high school grade point averages and admission test scores, applicants have become more highly qualified. Because more applicants and more applicants with better qualifications are seeking admission to Berkeley, Berkeley's five colleges have imposed additional criteria for admission;
- Since it is more difficult to gain admission to some colleges than to others, the college to which an applicant applies is a major factor in whether or not an applicant is offered admission;
- Thousands of well-qualified Asian and Caucasian applicants are denied admission to Berkeley because of space limitations;
- For the fall 1987 semester, Berkeley denied admission to 2,150 Asian and Caucasian applicants who had achieved high school grade point averages of 4.0 or more;
- The admission rates of Asian and Caucasian applicants decreased from 1981 through 1987 at four of Berkeley's five colleges; and

- From 1981 through 1987, when all Caucasian and Asian applicants, whether they were protected or not protected, are considered, Caucasians gained admission to Berkeley's five colleges at rates that were higher in general than those of Asians. This review of admission rates does not consider the qualifications of the applicants offered admission.

---

## BACKGROUND

Berkeley's undergraduate division comprises five colleges: Letters and Science, Engineering, Chemistry, Environmental Design, and Natural Resources. First-year applicants must apply for admission to one of these five colleges. Before they will be considered for admission to a Berkeley college, most first-year applicants to Berkeley must meet the minimum eligibility requirements established by the University of California (UC) for admission to all of its campuses. According to UC officials, first-year applicants who meet the minimum eligibility standards are automatically offered admission to the campus of their choice if that campus can accommodate all eligible applicants. In addition, Berkeley designates some groups of applicants as "protected" from competing for admission; these applicants, which include some ethnic groups and recruited athletes, are guaranteed admission if they meet UC eligibility requirements.

According to Berkeley officials, as of the 1987 fall term, no college at their campus had space to admit all eligible applicants. As a result, Asian and Caucasian applicants, who are not protected on the basis of their self-reported ethnic status, compete for the spaces that the colleges have available. The colleges in high demand have adopted standards for selecting applicants that far exceed the minimum requirements of the UC.

---

## PRINCIPAL ISSUES

---

### Admission Practices at the University of California at Berkeley

Approximately one-half of the applicants that Berkeley's colleges select for admission as first-year students are selected solely on the basis of their high school grade point average and their scores on standardized tests. In 1985, Berkeley began combining grade point averages and test scores to derive for each applicant a numeric score, referred to as the "Academic Index Score" (AIS), which has a maximum value of 8,000 points. The second half of the applicants selected for admission include affirmative action applicants, those applicants admitted by special action, and those selected on the basis of a combination of the AIS and "supplemental criteria," which include factors such as California residency and the completion in high school of four years of foreign language courses. For applicants to the College of Letters and Science, the supplemental criteria had a maximum point value of 900 in 1985 and 1,304 in 1986. The Colleges of Engineering, Chemistry, Environmental Design, and (acting for the College of Natural Resources) the Office of Admissions and Records also evaluate applicants on the basis of their AIS and supplemental criteria. Until 1987, none of these colleges assigned numeric scores for the supplemental criteria. In 1987, the Colleges of Environmental Design and Natural Resources began assigning points for supplemental criteria.

---

### Trends in Admission Rates

In 1986 and 1987, Asians and Caucasians accounted for 74 percent or more of all first-year applicants to Berkeley. From 1981 through 1987, the number of Asian applicants for admission to Berkeley increased from 1,722 to 5,032, a 192.2 percent increase; the number of Caucasian applicants increased from 5,006 to 11,286, a 125.4 percent increase. From 1981 through 1987, the average high school grade

point average of Asian applicants rose from 3.20 to 3.72; the average grade point average of Caucasians during the same period rose from 3.27 to 3.62. The average and median AIS' of Caucasians and Asians are shown in Appendix J.

We reviewed the admission rates of Asians and Caucasians who applied to Berkeley's colleges from 1981 through 1987. For this seven-year period, we calculated the admission rates for five colleges, dividing two of the colleges into four groups of departments and programs. Therefore, we calculated 49 separate rates of admission for Asians and Caucasians. This review of admission rates does not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories. Of the 49 Asian admission rates and the 49 Caucasian admission rates that we compared with each other, the Caucasian rates were higher in 37 instances, and the Asian rates were higher in 12 instances. In 26 of the 49 comparisons of admission rates, which account for 76.9 percent of the Asian and Caucasian admissions, the difference in rates was 5.0 percentage points or less. The specific rates of admission of Asians and Caucasians--by AIS range, by college, and by year--are shown in Appendices C through I.

---

#### AGENCY COMMENTS

In its response, the University of California states that the admission policies and practices of the university and its Berkeley campus are fair, impartial, and evenhanded for all applicants. The response also points out that the Berkeley campus has organized an Asian task force to ensure the full participation of Asians in campus life. However, according to the university, a fairer representation of the admission rates of Asians and Caucasians would be arrived at by calculating separate admission rates for three groups of applicants: those admitted on the basis of the highest scholastic scores, "special admissions groups," and those who are admitted on the basis of both scholastic and supplemental criteria. (See page 135 for the complete text of the university's response to our report.)

## INTRODUCTION

The University of California (UC) is a constitutionally established public trust. It is administered by a board of regents (regents), which has full powers of organization and government over the UC. There are currently 30 regents: 7 ex officio members, including various constitutional officers of the State, and 23 appointed members.

The regents have overall authority for admissions to the UC system. However, the regents have delegated their authority for setting criteria for admissions to the UC to the Academic Senate, which consists of faculty and administrators from all nine campuses in the UC system. The regents retain the right to approve the criteria established by the Academic Senate. According to Berkeley's director of the Office of Admissions and Records, the regents also have delegated to the campuses the authority to select applicants for admission to colleges that have more eligible applicants than they can accommodate.

The University of California at Berkeley (Berkeley), one of nine campuses in the UC system, is one of the most prestigious universities in the country--its faculty of 1,705 includes 12 Nobel Laureates. Berkeley's reputation in the academic community, coupled with the UC's relatively low costs compared to highly regarded private colleges in California, make Berkeley one of the most desirable campuses in the university system.

According to the UC's Office of the President, more than 21,500 of Berkeley's 29,416 nonforeign students enrolled for the fall 1986 semester were undergraduate students; the undergraduates included 3,235 new first-year students. Table 1 shows the fall 1986 distribution among Berkeley's undergraduate colleges and schools of all nonforeign undergraduates.

To be eligible for admission as a first-year student to Berkeley, or any other UC campus, applicants must meet the minimum requirements of the UC. According to a report issued by the UC's Office of the President in March 1987 entitled "Application, Admission, and Enrollment Statistics," eligible applicants to the UC can still be offered admission to one of the campuses in the UC system, but only with increasing difficulty, since, according to the report, not all UC campuses can accommodate all eligible applicants. Berkeley is one of the UC campuses that cannot accommodate all eligible applicants.

Berkeley's inability to accommodate all eligible applicants has generated some controversy over its admissions policies and practices. For example, the Asian American Task Force on University Admissions issued a report in June 1985 entitled "Task Force Report" that charged Berkeley with using admissions criteria that reduce Asians' chances of being admitted to Berkeley. Berkeley issued a report entitled "Asian Admissions at UC Berkeley" in January 1987 that concluded that Berkeley does not discriminate in policy or practice against any ethnic group seeking admission to Berkeley; the report also stated that, in the fall of 1986, Asians accounted for 26 percent of the undergraduate student population at Berkeley.

Berkeley's chief administrative officer is its chancellor. For fiscal year 1986-87, funding for Berkeley totaled approximately \$463.5 million; approximately \$319 million was from state funds, and the remaining approximately \$144.5 million was from other sources, including UC funds.

#### SCOPE AND METHODOLOGY

The purpose of this audit was to review the policies and procedures for admitting nonforeign first-year students who applied to five colleges at Berkeley for the fall terms from 1981 through 1987; to develop and analyze statistics concerning the applications and admissions of first-year Asian and Caucasian applicants to Berkeley from 1981 through 1987; and to develop and analyze enrollment

statistics for 1981 through 1986. Further, we determined the accuracy of information in Berkeley's January 1987 report concerning the admission and enrollment of Asians at Berkeley.

Statistics in this report concerning different ethnic groups are based entirely on information that applicants to Berkeley provided on their application forms. Therefore, these statistics are accurate only to the extent that the applicants accurately reported this information. In addition, statistics in this report are for applicants seeking admission as first-year students, that is, applicants who are new from high school. Berkeley calls these applicants freshmen.

In our report, the term "Asians" includes the following specific ethnic groups, as they are listed on Berkeley's application for admission: Chinese/Chinese-American, East Indian/Pakistani, Japanese/Japanese-American, Korean/Korean-American, Polynesian, Thai, and Other Asian. Statistics on Filipino applicants are not included because Berkeley treats these applicants as a "protected" or "partially protected" minority; therefore, they do not compete for admission in the same way that other Asians or that Caucasians do. However, in our report, we designated as unprotected those groups of applicants who were protected for reasons other than ethnic identity--such as disabled applicants and recruited athletes.

Unless otherwise specified, the statistics in this report are limited to Asians and Caucasians. Applicants, excluding Filipinos, who

report that they are members of either of these two ethnic groups receive no special consideration in the admissions process on the basis of their self-reported ethnic status, and they constituted the substantial majority of applicants between 1981 and 1987. In 1986, for example, a Berkeley report pointed out that these two groups accounted for 74 percent of all first-year applications. In 1985, they accounted for 78.7 percent of all first-year applications.

Applicants who either decline to state their ethnic background or check "Other" also receive no special consideration in the admissions process on the basis of their self-reported ethnic status. The 1986 and 1987 statistics in this report include data for applicants who were in either of these categories. We combined the statistics for applicants in these categories and reported them as "Declined to state/Other" because the number of applicants in these categories is relatively small and because they did not report an ethnic status in one of the major ethnic groups that UC lists on its application forms. However, the 1981 through 1985 statistics in this report exclude applicants in the combined "Decline to state/Other" category. We excluded these statistics primarily because we found a significant number of coding errors concerning the "Decline to state" category on the data base maintained by Berkeley's Office of Admissions and Records, which was our source of the statistics in our report concerning applications and admissions. In addition, the number of applicants in the "Other" category is relatively small, ranging from 2.3 percent of all applicants in 1984 to 3.7 percent of all applicants in 1981.

In conducting this study, we interviewed various officials from the UC and from Berkeley, and we reviewed Berkeley's documents related to admissions. We also reviewed and analyzed data from computer tapes that store data on applications, admissions, and enrollments for the 1981 through 1986 fall terms; for the 1987 fall term, we reviewed tapes with data on applications and admissions through June 30, 1987. We tested the information on the 1985 and 1986 computer tapes and found that it was generally accurate. For applicants enrolled in the 1981 through 1986 fall terms, we found that the aggregate statistics by ethnic group on the computer tapes matched the statistics in various Berkeley reports, including the statistics presented in a table in its January 1987 report entitled "Asian Admissions at U.C. Berkeley"; a slightly revised version of this table is included in Appendix B of our report.

The data that we report on the applicants' academic index scores and on the admission rates of Asians and Caucasians are limited by several factors. In Appendix A, we present a detailed discussion of the scope of our audit, the methodologies we used, and the factors that limit or qualify the data we report. Because the admissions process is complex, the reader should be familiar with the information in Appendix A before drawing conclusions concerning the comparative qualifications and admission rates of the two groups. Most importantly, readers should note that we could not fully test the admissions systems at Berkeley's colleges either for compliance with their selection criteria or for the appropriateness of admissions

decisions; we could not fully test the admission systems because, in response to UC policy and in keeping with Berkeley's record-keeping practices, Berkeley did not retain all of the selection criteria and documentation used in selecting applicants for admission.

CHAPTER I  
**PRACTICES USED BY THE UNIVERSITY  
OF CALIFORNIA AT BERKELEY FOR  
ADMITTING FIRST-YEAR STUDENTS**

We reviewed the practices used by the University of California at Berkeley (Berkeley) for admitting first-year students for the fall terms from 1981 through 1987. During this period, there were more applicants to most of Berkeley's colleges and departments than Berkeley could accommodate. To select approximately one-half of their "admission target," Berkeley's colleges used methods and criteria that were similar.\* The colleges varied however, in the methods they used to select the remaining one-half of their admission targets. In addition, even though the colleges used similar methods in selecting the first half of their applicants, the specific scholastic criteria selected applicants were required to meet varied significantly from college to college because of variations in the size and overall scholastic qualifications of the pool of applicants to each college.

From 1981 through 1984, the primary scholastic criteria Berkeley used for selecting approximately one-half of its admissions target consisted of the applicants' high school grade point averages (GPA) alone or a combination of the applicants' GPAs and their standardized test scores. In 1985, Berkeley started using as its

---

\*In this report, we use the term "admission target" to mean the number of applicants a particular college determines it should accept to meet its "enrollment target." Since not all applicants offered admission will choose to enroll at Berkeley, the admission target is larger than the enrollment target.

scholastic criteria the "Academic Index Score" (AIS), which is the sum of an applicant's GPA multiplied by 1,000 (4,000 maximum), the applicant's best Scholastic Aptitude Test (SAT) scores or American College Test (ACT) scores (1,600 maximum), and the applicant's three best Achievement Test scores (2,400 maximum). The AIS has a maximum value of 8,000 points. In this report, we refer to the group of applicants selected through this process as Tier 1.

From 1981 through 1987, the second half of the applicants selected for admission generally included applicants admitted by "special action," applicants in "special categories," and applicants whose selection was based upon a combination of scholastic criteria and "supplemental" criteria. We refer to the group of applicants selected through this process as Tier 2. The criteria and procedures that most of Berkeley's colleges used to select this half of its admissions target changed little between 1981 and 1987. However, in the fall of 1984, according to the associate director of the Admissions Division of the Office of Admissions and Records (OAR), because there were so many highly qualified applicants to the college that year, applicants who were not admitted in Tier 1, by "special action," or through a "special category" were admitted only if they appealed the OAR's initial decision to deny admission.\* In addition, in 1985, the OAR implemented

---

\*According to the associate director, from 1981 through 1985, in its denial letters, Berkeley offered applicants to the College of Letters and Science who were denied admission the opportunity to appeal the denial decision. In 1986, Berkeley discontinued this practice; however, applicants denied admission may still appeal decisions if they wish to.

a new system for evaluating applicants to the College of Letters and Science on the basis of supplemental criteria. The new system added criteria that were not used from 1981 through 1984 and included points for the essay that applicants wrote as part of their applications.

#### GENERAL ADMISSION PROCEDURES

Processing undergraduate admissions to Berkeley is primarily the responsibility of the Admissions Division in Berkeley's OAR. The Admissions Division receives applications, evaluates applicants' eligibility for admission to the University of California (UC), uses Berkeley's automated data base for undergraduate admissions information, and provides the public and Berkeley's colleges with information concerning policies and procedures for undergraduate admissions. The head of the Admissions Division is an associate director of the OAR, who reports to the director of the OAR. The director makes all offers of undergraduate admission to Berkeley.

From 1981 through 1987, the OAR processed applications and performed most of the other admissions-related functions for the College of Letters and Science and the College of Natural Resources. These functions included determining which applicants should be offered admission. From 1981 through 1987, the Admissions Division also processed applications to the Colleges of Environmental Design, Chemistry, and Engineering. According to the associate director of the Admissions Division, the division assisted the faculty of these

colleges in determining which applicants should be offered admission. Berkeley's admissions policies for this period specified that the faculty at these three colleges should participate in the admissions decisions for their colleges.

Most applicants to Berkeley must meet the minimum admission requirements of the UC before they can be selected for admission to one of the five colleges at Berkeley. To be eligible for the UC, applicants must meet a subject requirement, a scholarship requirement, and an examination requirement. In this report, we refer to applicants who meet the minimum requirements as "UC-eligible."

To meet the UC's subject requirement, applicants must have achieved a grade of "C" or better in specified courses taken in grades nine through twelve. Courses in the following areas satisfy the subject requirement: United States history, English composition and/or literature, mathematics, foreign language, and laboratory science. The number of years of these subjects that satisfied the UC's subject requirement from 1981 through 1987 are specified in Table 3.

**TABLE 3**  
**UNIVERSITY OF CALIFORNIA**  
**SUBJECT REQUIREMENTS--YEARS REQUIRED**  
**1981 THROUGH 1987**

Subject	Number of Years Required						
	1981	1982	1983	1984	1985	1986	1987
History	1 year	1 year	1 year	1 year	1 year	1 year	1 year
English	4 years	4 years	4 years	4 years	4 years	4 years	4 years
Mathematics	2 years	2 years	2 years	2 years	2 years	3 years	3 years
Laboratory science	1 year	1 year	1 year	1 year	1 year	1 year	1 year
Foreign language	2 years	2 years	2 years	2 years	2 years	2 years	2 years
Advanced courses	1-2 years	1-2 years	1-2 years	1-2 years	1-2 years	4 years*	4 years*

\*Note: In 1986, the Advanced Course requirement was renamed the College Preparatory Elective Course.

Applicants meet the UC's scholarship requirement if the combination of their high school GPA and either their SAT score or their ACT score is high enough. The high school courses used to compute applicants' GPAs are those that satisfy the UC's subject requirements. Applicants who are California residents automatically meet the scholarship requirement with a 3.3 GPA (4.0 maximum); nonresident applicants must have a 3.4 GPA to automatically meet this requirement. Table 4 shows the combinations of GPAs and SAT or ACT scores that satisfy the scholarship requirement, which was the same for all years from 1981 through 1987.

**TABLE 4**  
**UNIVERSITY OF CALIFORNIA**  
**ELIGIBILITY INDEX: GPA COMBINED**  
**WITH SAT OR ACT SCORES**  
**1981 THROUGH 1987**

<u>High School GPA</u>	<u>ACT Composite</u>	<u>SAT Total</u>	<u>High School GPA</u>	<u>ACT Composite</u>	<u>SAT Total</u>

2.91	30	1300	3.18	12	670
2.92	29	1270	3.19	11	640
2.93	29	1250	3.20	10	620
2.94	28	1230	3.21	9	600
2.95	28	1200	3.22	9	570
2.96	27	1180	3.23	8	550
2.97	27	1160	3.24	8	530
2.98	26	1130	3.25	7	500
2.99	26	1110	3.26	7	480
3.00	25	1090	3.27	6	460
3.01	25	1060	3.28	6	430
3.02	24	1040	3.29	5	410
3.03	24	1020	3.30	5	400
3.04	23	990			

To meet the UC's examination requirement, applicants must have taken and submitted to Berkeley their scores for the math and verbal sections of the SAT or the ACT and for three Achievement Tests. Each of the two sections of the SAT, mathematics and verbal, has a maximum point value of 800; the ACT test sections have a different point scale

but are converted to a scale that is comparable to that of the SAT. Each Achievement Test has a maximum point value of 800. The Achievement Tests must include the English composition test, a mathematics test, and one elective test in any of the following areas: English literature, foreign language, science, or social studies. The only changes from 1981 through 1987 in the examination requirement concerned which tests could be taken to meet the elective Achievement Test requirement. In 1981 and 1982, applicants could take elective Achievement Tests in either social studies or a foreign language. From 1983 through 1987, sciences and English literature were additional elective test options.

Applicants to Berkeley may meet the minimum admission requirements of the UC by fulfilling the scholarship, subject, and examination requirements specified above or by achieving high enough scores on their SAT or ACT and three Achievement Tests. For California residents, the test scores required are either a combined total of 1,100 on the math and verbal sections of the SAT or 26 on the ACT and a combined total of 1,650 on the Achievement Tests (with no single Achievement Test score lower than 500). Nonresident applicants must attain the same minimum scores on the SAT or the ACT but must attain a combined total of at least 1,730 on their Achievement Tests (with no single Achievement Test score lower than 500) to meet the UC's minimum requirements based on test scores alone.

Most applicants selected for admission must be UC-eligible before they can enroll. According to the associate director of the Admissions Division, Berkeley did offer admission to some applicants who had not submitted all official required grades and test scores by the time Berkeley made most of its admission decisions. The associate director also stated that Berkeley offered these applicants admission based on a combination of official and self-reported information because the available data indicated that the applicants were highly qualified for admission.

#### FACTORS AFFECTING ADMISSION TO BERKELEY'S COLLEGES

Applicants for admission to Berkeley must apply specifically to one of Berkeley's five undergraduate colleges. The applicants' choices greatly affect their chances of being offered admission because some colleges are more difficult to get into than others. In addition, Berkeley designates some groups of applicants as "protected" from competing for admission.

#### Oversubscribed Colleges

Berkeley's five colleges can accommodate an average of approximately 3,600 first-year students in the fall of each year. According to the senior statistician at Berkeley's Office of Budget and Planning, the number of students that a college can accommodate is referred to as its "enrollment target." To meet its enrollment target,

each college also has an "admission target"--an estimate of how many applicants should be offered admission if the college is to meet its enrollment target. Not all applicants who are offered admission to Berkeley will accept the offer and enroll. Therefore, the admission target of each college exceeds its enrollment target.

According to Berkeley officials and UC documents, by the fall semester of 1987, the total number of UC-eligible applicants to Berkeley's colleges exceeded their admission targets. Consequently, none of Berkeley's colleges now offer admission to all eligible applicants. When this condition occurs in a college, Berkeley designates the college as "oversubscribed" or "impacted." According to Berkeley officials and documents, all colleges at Berkeley were oversubscribed by the fall of 1981 except the College of Natural Resources and the Department of Chemistry in the College of Chemistry. According to the associate director of the Admissions Division, the College of Natural Resources became oversubscribed in the fall semester of 1986, and, according to the associate dean of the College of Chemistry, the Department of Chemistry became oversubscribed in the fall semester of 1987.

### Protected Groups

Berkeley designates some groups of applicants as "protected" from competing for admission. From 1981 through 1987, the number of groups that Berkeley has designated as protected has decreased, but

they have always included recruited athletes and underrepresented ethnic minorities--such as Native Americans, Hispanics, and Blacks--whose representation on the Berkeley campus is less than proportional to their representation in California's public high schools. According to the assistant vice chancellor for Undergraduate Affairs, Berkeley protects applicants from underrepresented ethnic groups to meet the affirmative action goals of the UC and in response to legislative resolutions. Although applicants in protected groups initially compete with all other applicants to Berkeley's colleges, if they are not offered admission through the competitive admissions process, they are guaranteed admission to Berkeley if they are UC-eligible. Even though Berkeley guarantees admission to UC-eligible applicants in protected groups, these applicants may not be offered admission to their first choice of a college.

According to the associate director of the Admissions Division, for the fall 1985 admissions process Berkeley had to decrease the number of protected groups because the number of applicants admitted from these groups grew so large from 1981 through 1984 that they, together with the special action admissions, were accounting for most of the Tier 2 applicants selected by oversubscribed colleges. The associate director also pointed out that Asians and Caucasians who were confirmed as eligible for the Educational Opportunity Program were protected from 1981 through 1983 but were no longer protected in 1984. Groups that were protected from 1981 through 1984 but were not protected in 1985 or later also include applicants accepted in the Naval Reserve Officers Training Corps and military veterans.

## ADMISSION PRACTICES OF OVERSUBSCRIBED COLLEGES, 1981 THROUGH 1987

From 1981 through 1987, Berkeley could not offer fall admission to all applicants who were UC-eligible because, according to Berkeley documents and officials, most of Berkeley's colleges were oversubscribed during part or all of this period. Therefore, Berkeley's oversubscribed colleges selected for admission those applicants who met certain criteria that were based on criteria developed by the UC in 1973; the UC criteria established the framework for the Tier 1 and Tier 2 selection of applicants. The associate director of the Admissions Division stated that, from 1981 through 1985, all of the applicants to oversubscribed colleges to whom Berkeley did not offer admission were "redirected" to other UC campuses. Redirection of applicants ended with the fall 1986 admission cycle when the UC implemented a system allowing applicants to apply to more than one UC campus on one application form.

### Redirection to Other UC Campuses

From 1981 through 1985, the primary method by which Berkeley dealt with applicants whom its colleges did not select for admission was to "redirect" their applications to other UC campuses that were not oversubscribed and that offered the same programs for which the applicants had applied to Berkeley. Redirected applicants were not generally guaranteed admission to the colleges at the campuses to which they were redirected; before they were considered for admission to

these colleges, they had to be found UC-eligible. Redirection ended with the fall 1986 admission process when the UC implemented a new application system, the multiple filing system, and allowed applicants to apply to more than one UC campus on one application form. The vice chancellor for undergraduate affairs at Berkeley stated that the UC implemented the multiple-filing system because redirection was not effective in dealing with applicants who were not selected for admission by oversubscribed colleges in the UC system.

For the fall 1986 and fall 1987 admission processes, Berkeley offered several options to applicants who were not offered admission. For example, applicants could either be re-evaluated for admission to Berkeley in the following spring semester, or they could attend certain California community colleges for two years, and, if they met certain academic standards, would be guaranteed admission to Berkeley as juniors.

#### Selection Criteria of Oversubscribed Colleges, 1981 Through 1984

From 1981 through 1984, all but two of Berkeley's five colleges were oversubscribed. Since Berkeley could no longer offer admission to all UC-eligible applicants, it established the following system for selecting its admission target. Approximately one-half of its admission target (Tier 1) was selected solely on the basis of scholastic criteria; selection of the remaining one-half of the

admission target (Tier 2) was based on "special categories" criteria, "special action" criteria, and a combination of scholastic criteria and "supplemental" criteria.

According to the assistant director of the Admissions Division, deans of the Colleges of Engineering and Chemistry, and the student affairs officer at the College of Environmental Design, from 1981 through 1984, the oversubscribed colleges based their selection of Tier 1 applicants on either the applicants' GPAs alone or on a combination of their GPAs and standardized test scores.\* That is, one-half of all applicants that each college selected for admission had the highest GPAs or the highest combinations of GPAs and standardized test scores of all applicants to that college.

Applicants in "special categories" represented one group that was selected for admission to oversubscribed colleges through Tier 2 of the admission process. According to the associate director of the Admissions Division, these applicants included those in protected groups and those who required a different evaluation than other applicants required because of special circumstances. For example, they may have attended a private or foreign high school with a grading scale that differed from that of public high schools, or they may have attended a high school that did not give letter grades. (Applicants in protected groups were discussed on pages 17 and 18 of this report.)

---

\*The College of Engineering sometimes considered the strength of the applicant's high school academic program.

According to the associate director of the Admissions Division, Berkeley's admissions policies for 1981 through 1984 did not specify a minimum or maximum number of applicants that colleges should select from special categories. The associate director also stated that most of the applicants in special categories were in designated protected groups and, from 1981 through 1984, were guaranteed admission to the College of Letters and Science if they were UC-eligible. As a result, there was no limit within Tier 2 to the number of applicants in special categories that the College of Letters and Science could select for admission. However, officials of the Colleges of Engineering, Environmental Design, and Chemistry stated that these colleges offered admission to applicants in a special category only if the faculty believed that they could successfully complete the coursework of their college.

According to the associate director of the Admissions Division, Tier 2 also included applicants admitted by "special action." These applicants did not meet the minimum requirements of the UC but were offered admission to Berkeley after review and approval by a Special Action Committee or by the OAR. The general criterion for admission of applicants by special action is evidence of their potential to succeed at Berkeley, even though they do not meet the UC's minimum requirements. According to Berkeley's admission policies and to the associate director of the Admissions Division, from 1981 through 1984, special action admissions could account for no more than 6 percent of the total admissions for the campus.

According to the associate director of the Admissions Division and deans of the Colleges of Engineering, Environmental Design, and Chemistry, selection of the final group of applicants within Tier 2 was based on a combination of scholastic and supplemental criteria. The number of applicants that could be selected on this basis was equal to one-half of the admission target minus the number of applicants admitted from special categories and by special action.

The criteria that the colleges used to select this group of applicants included a combination of scholastic factors such as GPA, SAT scores, ACT scores, Achievement Test scores, and supplemental factors such as California residency, Bay Area residency, and demonstrated financial or educational hardship. According to the associate director of the Admissions Division, each of the supplemental criteria was assigned a point value that could be used by the oversubscribed colleges to evaluate applicants. The associate director stated that the OAR calculated supplemental criteria points for each applicant to an oversubscribed college who was not among the Tier 1 applicants selected on scholastic criteria alone, grouped these applicants by college, and provided a list of applicants and their supplemental criteria points to each college to use when evaluating applicants.

According to the associate director of the Admissions Division, the OAR assigned points for supplemental criteria in determining which applicants should be offered admission to the College

of Letters and Science. In contrast, deans of the Colleges of Chemistry, Engineering, and Environmental Design stated that the faculty of these three colleges did not use the points the OAR assigned to supplemental criteria and did not themselves assign points to supplemental criteria in making their admission decisions; however, the deans stated that they did review the supplemental criteria in determining which applicants to select for admission.

Selection Criteria of  
Oversubscribed Colleges,  
1985 Through 1987

For the fall 1985 admission process, Berkeley developed a system for evaluating applicants based on an "Academic Index Score" (AIS). The AIS, which has a maximum value of 8,000 points, equals the sum of an applicant's high school GPA (maximum of 4.0 points) multiplied by 1,000, the highest combined verbal and math SAT or ACT scores from a single sitting (maximum of 1,600 points), and the best combined Achievement Test scores (maximum of 2,400 points). Using these test scores and the applicants' GPAs, the OAR calculates the applicants' AIS. The OAR uses a computer program to group applicants by the college they have applied to and to rank them according to their AIS. (According to the associate director for the Admissions Division, the AIS does not include points for Achievement Test Scores if one or more of these scores is missing.)

Table 5 illustrates the values that result from different combinations of AIS components.

**TABLE 5**  
**ACADEMIC INDEX SCORES**  
**RESULTING FROM POSSIBLE COMBINATIONS OF**  
**SAT SCORES (MATH PLUS VERBAL),**  
**THREE ACHIEVEMENT TESTS (ACH), AND GPA**

	SAT	700	800	900	1000	1100	1200	1300	1400	1500	1600
	ACH	<u>600</u>	<u>800</u>	<u>1000</u>	<u>1200</u>	<u>1400</u>	<u>1600</u>	<u>1800</u>	<u>2000</u>	<u>2200</u>	<u>2400</u>
GPA	4.0	5300	5600	5900	6200	6500	6800	7100	7400	7700	8000
	3.5	4800	5100	5400	5700	6000	6300	6600	6900	7200	7500
	3.0	4300	4600	4900	5200	5500	5800	6100	6400	6700	7000
	2.5	3800	4100	4400	4700	5000	5300	5600	5900	6200	6500
	2.0	3300	3600	3900	4200	4500	4800	5100	5400	5700	6000

### Tier 1 Admissions

The associate director of the Admissions Division and deans of the Colleges of Engineering, Environmental Design, and Chemistry stated that, for 1985 and 1986, Berkeley's oversubscribed colleges used the AIS as a basis for selecting Tier 1 applicants for admission; the applicants selected for each college were those with the highest AIS. Table 6 shows the AIS "cutoff" scores used for 1985, 1986, and 1987 fall admissions; for these terms, the OAR and the colleges selected applicants whose AIS was at or above the cutoff score.

**TABLE 6**

Chemical Engineering	*	*	7100
Natural Resources:	U.C. Minimum	*	6910
	Eligibility		

\*Cutoff scores not available.

For the fall 1985 and 1986 terms, according to the associate director of the Admissions Division, the OAR used the AIS rankings to make Tier 1 selections for the College of Letters and Science. The associate director also said that, in 1986, when the College of Natural

Resources became oversubscribed, the OAR admitted all eligible applicants to this college who selected forestry as their major and selected from the remaining pool of applicants those with the highest AIS rankings; some UC-eligible applicants were not offered admission. The associate dean of the College of Engineering indicated that, in 1985, Tier 1 selections equalled approximately 50 percent of its admission target; in 1986, Tier 1 selections equalled approximately 42 percent of its admission target. An associate dean and the student affairs officer in the College of Environmental Design indicated that Tier 1 selections equalled approximately 50 percent of this college's admission target. Finally, according to the former assistant dean of the College of Chemistry and the associate director of the OAR's Admissions Division, in 1985, the former associate dean's Tier 1 selections equalled approximately 50 percent of the college's admission target for the Chemical Engineering Department. However, the former associate dean used a lower minimum AIS for California residents than for nonresidents.

### Tier 2 Admissions

In 1985 and 1986, Tier 2 selections for Berkeley's oversubscribed colleges included the same three major groups that constituted the second half of applicants selected between 1981 and 1984: applicants admitted by special action, applicants selected from special categories, and applicants selected on the basis of scholastic criteria plus supplemental criteria. The special action criteria were

essentially the same in 1985 and 1986 as they were between 1981 and 1984. (We describe admission by special action on page 22 of this report.)

According to a memorandum issued by the chairwoman of the Committee on Special Action Admissions for the 1986-1987 school year, special action admissions for that school year were to include 65 percent underrepresented minorities or applicants who qualified for the Educational Opportunity Program and 25 percent athletes; the remaining 10 percent were to be "other" applicants.

The criteria for admissions of most applicants in special categories were essentially the same in 1985 and 1986 as they were from 1981 through 1984; however, Berkeley decreased the number of protected groups. We discuss the admission of applicants in special categories on pages 21 and 22 of this report.

For fall 1985 admissions, the OAR continued to use a combination of scholastic criteria and supplemental criteria for evaluating applicants and making part of its Tier 2 selections for the College of Letters and Science. This method was also used in 1986. However, as indicated in the following paragraphs, the process was substantially changed from that used from 1981 through 1984. In general, beginning in 1985, the OAR reviewed applications, assigned points for supplemental criteria, added the total supplemental criteria points to the AIS, ranked all applicants reviewed according to their

combined AIS and supplemental criteria score, and selected those applicants with the highest combined scores.

The OAR determined which applicants to review for supplemental criteria in the following way. First, the OAR identified the number of applicants who could be offered admission on the basis of a combination of scholastic criteria and supplemental criteria. This number of applicants was determined by adding the number of applicants selected in Tier 1, the number of applicants selected on the basis of special action criteria, and the number of applicants selected from special categories and subtracting this sum from the total number of applicants who could be selected for the College of Letters and Science. The associate director of the Admissions Division stated that he then determined the range of academic index scores within which all applicants should be reviewed for supplemental criteria. The upper limit of the range of scores was just below the cutoff score for Tier 1 selections; in 1985 that score was 6,579, and in 1986 it was 7,039. The lower limit of the range of scores was 5,781 in 1985 and 6,801 in 1986. According to the associate director of the Admissions Division, the applicants reviewed for supplemental criteria included applicants with academic index scores within specified ranges, all applicants who attend a private or foreign high school with a grading scale that differed from that of public high schools, and all applicants who attended a high school that did not give letter grades.

The specific supplemental criteria used in 1985 and 1986 are shown in Table 7.

**TABLE 7**  
**UNIVERSITY OF CALIFORNIA AT BERKELEY**  
**COLLEGE OF LETTERS AND SCIENCE**  
**VALUES ASSIGNED TO SUPPLEMENTAL CRITERIA**  
**FALL 1985 AND 1986**

<u>Criterion</u>	<u>1985 Points</u>	<u>1986 Points</u>
1. California residency	200	200
2. Educational Opportunity Program	0	200
3. Four years of mathematics or three years of laboratory science	100	100
4. Four years of one language or two years of two languages	100	100
5. Exemption from Subject A	100	100
6. Two honors courses not offered during the junior year of high school	100	100
7. Maximum score for essay	<u>300</u>	<u>504</u>
Maximum Points Possible	<u>900</u>	<u>1304</u>

**Notes**

1. Items 1-6. Applicants receive all points possible if they meet the criteria, 0 points if they do not.
2. Item 2. The Educational Opportunity Program is designed to increase the enrollment of educationally disadvantaged and low-income students.
3. Item 5. The Subject A requirement is a writing proficiency requirement that applicants can meet in a variety of ways, such as taking courses or passing examinations.
4. Item 7. According to the OAR's instructions for evaluating essays, essays are reviewed holistically; scores are assigned on the basis of a number of different factors, including the writer's motivation, leadership, hardship, and extracurricular activities.

According to the former associate dean of the College of Chemistry, the associate dean of the College of Engineering, and the student affairs officer of the College of Environmental Design, all three of these colleges considered some of the supplemental criteria specified in Table 7 when selecting Tier 2 applicants for these colleges in 1985 and 1986; however, none of these colleges assigned points for supplemental criteria. In addition, these colleges had no written procedures for evaluating the applicants according to numerically based supplemental criteria, and they had few records by which we could verify the criteria or the procedures they used to evaluate these applicants.

The former associate dean of the College of Chemistry stated that he selected the applicants with the best academic qualifications in science and math. However, according to both the former associate dean and the associate dean of this college, there were no records available to substantiate this statement. In addition, from our review of the documents that the former associate dean used to select applicants for the fall semester of 1985, we determined that he did not select any applicants who were not residents of California.

According to the associate dean of the College of Engineering, faculty committees in this college made the Tier 2 selections in 1985 and 1986. The committees reviewed the files of all applicants who were not selected in Tier 1 and considered a variety of factors, such as the applicants' essays and the applicants' test scores and grades,

especially in math, before making the Tier 2 selections. However, there were few records available to substantiate these criteria.

The associate dean and the student affairs officer in the College of Environmental Design indicated that, although they did consider SAT scores and high school GPAs when selecting applicants, they believed the essay section of the supplemental review to be the most important factor in selecting Tier 2 applicants. However, there were few records available by which we could verify this college's use of supplemental criteria to evaluate applicants.

According to the associate director of the Admissions Division and deans of the Colleges of Chemistry, Engineering, and Environmental Design, Berkeley's admissions procedures and criteria were essentially the same for 1987 as they were in 1986, with three primary exceptions: first, Tier 1 selections for the Colleges of Letters and Science, Chemistry, and Environmental Design totaled approximately 40 percent of their admission targets rather than 50 percent, as was the stated practice in earlier years; second, the College of Engineering selected 33 to 40 percent of its admission target on the basis of scholastic criteria alone rather than 42 to 50 percent, as was the stated practice in earlier years; and, third, the College of Environmental Design and the OAR (acting for the College of Natural Resources), began assigning points to supplemental criteria in selecting some of the Tier 2 applicants, which totaled 60 percent of their admission targets.

## CONCLUSION

From 1981 through 1987, there were more applicants to most of Berkeley's colleges and departments than Berkeley could accommodate. As a result, Berkeley used a system for selecting applicants whereby approximately one-half of the applicants selected for each college (Tier 1) were selected solely on the basis of scholastic criteria, and the remaining applicants selected (Tier 2) included applicants admitted by "special action," applicants in "special categories," and applicants selected on the basis of a combination of scholastic criteria and "supplemental" criteria.

Each college used similar methods in selecting its Tier 1 applicants; that is, each college selected the applicants with the best scholastic qualifications. However, colleges varied in their methods of selecting Tier 2 applicants. In addition, even though the colleges used similar methods for selecting Tier 1 applicants, the specific scholastic criteria that applicants were required to meet for selection varied significantly from college to college because of variations in the overall scholastic qualifications of the pool of applicants to each college. In response to UC policy and in keeping with Berkeley's record practices, Berkeley did not retain all of its admissions records. Consequently, we could not fully substantiate the admissions processes that,

according to its faculty, staff, and written policies, its colleges used to select applicants for admission from 1981 through 1987.

## CHAPTER II

### TRENDS IN THE APPLICATIONS AND ADMISSIONS OF ASIAN AND CAUCASIAN FIRST-YEAR APPLICANTS TO THE UNIVERSITY OF CALIFORNIA AT BERKELEY

Since 1981, more applicants and more applicants with better qualifications have been seeking admission to Berkeley. From 1981 through 1987, the total number of Asian and Caucasian applicants for Berkeley's approximately 3,600 available first-year spaces increased from 6,728 to 16,318, a 142.5 percent increase; the average high school GPA of Asian and Caucasian applicants to Berkeley rose from 3.25 in 1981 to 3.65 in 1987. During this period, the number of Asian applicants to Berkeley increased from 1,722 to 5,032, a 192.2 percent increase; the number of Caucasian applicants increased from 5,006 to 11,286, a 125.4 percent increase. Also during this period, the average GPA of Asian applicants increased from 3.20 to 3.72, and the average GPA of Caucasian applicants increased from 3.27 to 3.62. Because of this significant increase in the number of applicants, those colleges at Berkeley in high demand have adopted standards for selecting applicants that far exceed the minimum requirements of the UC. Consequently, it has become more difficult for applicants to Berkeley to gain admission to these colleges.\*

---

\*Asians (excluding Filipinos) and Caucasians receive no special consideration in the admissions process on the basis of their self-reported ethnic status.

Since Berkeley has space to enroll only an average of approximately 3,600 first-year students each year, it has denied admission to thousands of well-qualified Asian and Caucasian applicants. For the fall 1987 semester, for example, Berkeley denied admission to 2,150 Asian and Caucasian applicants who had at least 4.0 high school grade point averages and, according to a report prepared by Berkeley, to many more thousands of applicants who were eligible for admission because they met the minimum requirements of the UC.

Because of the significant increase in the number of applicants for the limited number of spaces available, the rates of admission for first-year applicants to four of Berkeley's five colleges have decreased since 1981. The differences in admission rates between Asian and Caucasian first-year applicants to Berkeley's colleges, departments, and programs varied between 1981 and 1987 from less than 1 percentage point in six instances to 30.7 percentage points at the Department of Chemistry in 1987. (Berkeley admitted to the Department of Chemistry in 1987 82 of 93 Caucasian applicants and 50 of 87 Asian applicants.) Of the 49 Asian admission rates and the 49 Caucasian admission rates we compared with each other, the Caucasian rates exceeded the Asian rates in 37 instances, and the Asian rates exceeded the Caucasian rates in 12 instances. However, in 26 of the 49 comparisons of admission rates, which account for 76.9 percent of the Asian and Caucasian admissions from 1981 through 1987, the differences in rates were 5.0 percentage points or less.

The following sections describe the trends in applications and admissions of Asian and Caucasian applicants to each college. The data we used to describe these trends are for nonforeign first-year applicants for the fall terms from 1981 through 1987. Before readers review or draw any conclusions concerning the statistics in the following sections, they should read Appendix A, which describes the limitations associated with these data.

These limitations include the fact that the data do not contain points for supplemental criteria and that Berkeley did not use the AIS before 1985. Consequently, we illustrate the AIS for all years only to depict the applicants' scholastic qualifications according to a common indicator. Further, Berkeley officials stated that they offered admission to some applicants who had not submitted all officially required grades and test scores. The AIS of some applicants on the automated data base that Berkeley used in its admissions process does not include points for the applicants' high school grade point averages or standardized test scores. We refer to these applicants as applicants with incomplete AIS profiles. While the data in Appendices C through I accurately depict admission rates, the AIS values in these appendices do not necessarily always reflect the scholastic qualifications of the applicants.

On the computer tapes we reviewed and used to produce the statistics in this report, 83.5 percent of the applicants had complete AIS profiles and 93.0 percent of the applicants offered admission had

complete AIS profiles. Of the Caucasian applicants, 18.2 percent had incomplete AIS profiles; of the Asian applicants, 12.5 percent had incomplete AIS profiles, a difference of 5.7 percentage points. Of the Caucasian applicants offered admission, 8.0 percent had incomplete AIS profiles; of the Asian applicants offered admission, 4.3 percent had incomplete AIS profiles, a difference of 3.7 percentage points.

## COLLEGE OF LETTERS AND SCIENCE

From 1981 through 1987, the number of Asian and Caucasian applicants to the College of Letters and Science more than doubled, from 5,166 to 12,138. The most significant increase in the number of applicants occurred between 1985 and 1986, when the UC began allowing applicants to select more than one UC campus on the application form. The college received 11,747 applications in 1986, an 85.1 percent increase over the 6,346 applications it received in 1985. The number of applicants admitted to the college from 1981 through 1987 varied from a low of 2,878 in 1981 to a high of 4,135 in 1983. The admission rates for this college also varied between 1981 and 1987: the lowest admission rate occurred in 1987, when 29.0 percent of the applicants were offered admission, and the highest admission rate occurred in 1983, when 72.6 percent of the applicants were offered admission.

Not only did the number of Asian and Caucasian applicants to the College of Letters and Science significantly increase from 1981 through 1987, but, as indicated by AIS scores, applicants have also become more highly qualified during this period. For example, the average AIS of all Asian and Caucasian applicants to the college in 1981 was 5,531; the average AIS for 1987 applicants was 6,220, an increase of almost 700 points.

During our study, we reviewed the admission rates of Asians and Caucasians applying to the College of Letters and Science from 1981

through 1987. In five of these years, the admission rates of Caucasians exceeded the admission rates of Asians. Below, we present a summary, by year, of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix C, which show the rates of admission within specific ranges of the AIS, and which are the basis for the admissions rates discussed below.

- 1981. The admission rate of Caucasians was 3.8 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 122 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 250 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 113 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 260 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 291 points higher than the average AIS of all Asian

applicants; the median AIS of all Caucasian applicants was 340 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 274 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 280 points higher than the median AIS of Asians offered admission.

- 1982. The admission rate of Asians was 0.5 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 70 points higher than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 80 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 46 points higher than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 105 points lower than the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 167 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was

140 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 138 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 150 points lower than the median AIS of Caucasians offered admission.

- 1983. The admission rate of Asians was 0.6 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 52 points higher than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 120 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 34 points higher than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 80 points lower than the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 148 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was

160 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 121 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 110 points lower than the median AIS of Caucasians offered admission.

- 1984. The admission rate of Caucasians was 7.6 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 60 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 110 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 126 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 56 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 136 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was

130 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 43 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 50 points lower than the median AIS of Asians offered admission.

- 1985. The admission rate of Caucasians was 5.0 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 128 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 20 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 185 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 50 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 87 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 87 points higher than the median AIS of all Asian applicants.

The average AIS of Caucasians offered admission was 62 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 30 points lower than the median AIS of Asians offered admission.

- 1986. The admission rate of Caucasians was 3.6 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 80 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was the same as the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 167 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 45 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 44 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 40 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 94 points

lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 50 points lower than the median AIS of Asians offered admission.

- 1987. The admission rate of Caucasians was 2.8 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 142 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 20 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 175 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 60 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 32 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 10 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 117 points lower than the average AIS of Asians offered admission; the

median AIS of Caucasians offered admission was 70 points lower than the median AIS of Asians offered admission.

During our review, we identified two factors that we believed might account for some of the differences between the Asian and the Caucasian admission rates from 1981 through 1987 at the College of Letters and Science: the admission of recruited athletes and the loss of "protection" for Educational Opportunity Program (EOP) applicants in 1984. We determined the effect of recruited athletes on the admission rates for all seven years and found that, for five of the years, the changes in the admission rate differences, excluding athletes, were less than 2 percentage points. When we recalculated the 1985 admission rates excluding the 12 recruited Asian athletes and the 302 recruited Caucasian athletes, the difference between the admission rates decreased from 5.0 percentage points to 2.6 percentage points. When we recalculated the 1986 admission rates, excluding the 6 recruited Asian athletes and the 337 recruited Caucasian athletes, the difference between the admission rates decreased from 3.6 percentage points to 1.5 percentage points.

We also considered the fact that, in 1984, Berkeley removed the "protected" status of Caucasian and Asian applicants who qualified for the EOP, requiring these applicants to compete for admission as

unprotected applicants.\* The number of Asian EOP applicants who were offered admission dropped from 183 of 197 (92.9 percent) in 1983 to 58 of 167 (34.7 percent) in 1984. Similarly, the number of Caucasian EOP applicants who were offered admission dropped from 41 of 45 (91.1 percent) in 1983, to 29 of 61 (47.5 percent) in 1984. We determined that, if Asian and Caucasian EOP applicants had been admitted to the College of Letters and Science at the same rate in 1984 as they were in 1983, then the difference in the overall 1984 admission rates of the two groups (51.9 percent for Asians and 59.5 percent for Caucasians) would have been 2.1 percentage points--58.0 percent for Asians and 60.1 percent for Caucasians. This difference does not reflect the effect of the recruited athletes on admission statistics.

In 1985, 1986, and 1987, the only years for which the College of Letters and Science used academic index "cutoff" scores, the Tier 1 admission rates of Asians were higher than the admission rates of Caucasians. Conversely, the Tier 2 admission rates of Caucasians were higher than the Tier 2 admission rates of Asians in all three years. In our analysis of Tier 1 and Tier 2 admission rates for this college, we did not evaluate the effect of the loss of protected status for qualified EOP applicants in 1984 or the effect of recruited Caucasian athletes who were offered admission.

---

\*We discuss the Educational Opportunity Program on page 18 of this report, and we discuss applicants protected from competition for admission on page 17 of this report.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the years in which the fewest and most applicants were affected by differences in admission rates. In 1982, the difference in admission rates was 0.5 percentage points; if the admission rates of the two groups had been the same, of the 3,513 applicants who were admitted, 5 more Caucasians and 5 fewer Asians would have been admitted. Conversely, in 1984, the difference in admission rates between the two groups was 7.6 percentage points. If the admission rates of Asians and Caucasians had been the same, of the 3,876 applicants who were admitted, 94 more Asians and 94 fewer Caucasians would have been admitted.

#### The College's Evaluation of Supplemental Criteria

As part of our review of the admission rates of Asians and Caucasians at the College of Letters and Science, we also reviewed the supplemental criteria scores of stratified random samples of applicants who, according to the associate director of the OAR's Admissions

Division, were evaluated for admission to this college in the fall terms of 1985 and 1986 on the basis of these criteria. We reviewed these scores because of allegations that the supplemental criteria favor Caucasians. Additionally, the tables in Appendix C, which depict admission rates within bands of the AIS, do not include points awarded applicants for supplemental criteria because, from 1985 through 1987, Berkeley did not record supplemental criteria points on the automated data base that was the source of the data in the tables in Appendix C. (We discuss the specific supplemental criteria that the College of Letters and Science used in 1985 and 1986 on page 30 of this report.)

In 1985, the supplemental criteria had a maximum value of 900 points; in 1986 these criteria had a maximum value of 1,304 points. We reviewed the supplemental criteria scores of 100 Asians and 100 Caucasians for each of these years and determined that the differences in the average supplemental criteria scores were 4 points in 1985 and 4 points in 1986; Asian applicants had the higher average scores in both years. We also found that Asian applicants scored marginally higher on the essay component of the supplemental criteria in 1985 and 1986 and on the non-essay component in 1986. The results of our review of supplemental criteria scores are shown in Tables 8 and 9.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Since the prior year's total was 0 and the current year's total is greater than 0, the percent change cannot be expressed as a finite number.

\*\*\* Since we did not review 1981-1985 statistics for applicants declining to state their ethnic status or choosing "other" ethnic status, we did not calculate the percent change from the prior year.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Since we did not review data for 1980, we did not calculate the percent change from the prior year.

## COLLEGE OF ENGINEERING

The College of Engineering comprises seven departments and four programs, and the number of applicants to each varies greatly. In addition, the scholastic requirements for admission to these departments and programs, which are specified on page 26 of this report, also vary. Consequently, it is much more difficult to gain admission to some departments and programs in this college than to others, a fact that is reflected in the very low admission rates of some departments and programs. The Department of Electrical Engineering and Computer Science (EECS), for example, had an overall admission rate of 20.9 percent for the fall 1986 semester.

To avoid presenting potentially misleading admission-related statistics for the College of Engineering, we separated the statistics into two groups: one group includes statistics for the Department of EECS and the Engineering Science program, which account for a substantial number of applicants to the college and have had the lowest admission rates of all departments and programs in the college; the second group comprises all other departments and programs in the college. Excluding the Department of EECS, the College of Engineering includes the following departments: Civil Engineering, Industrial Engineering and Operations Research, Mechanical Engineering, Materials Science and Mineral Engineering, Naval Architecture and Offshore Engineering, and Nuclear Engineering. Excluding the Engineering

Science program, College of Engineering includes the following programs: Manufacturing Engineering, Petroleum Engineering, and double majors.

#### EECS and Engineering Science

From 1981 through 1987, the number of Asian and Caucasian applicants to the Department of EECS and the Engineering Science program more than doubled, from 616 to 1,420. The most significant increase in the number of applicants occurred in 1984; the 1,335 applications the Department of EECS and the Engineering Science program received in this year represented an 87.2 percent increase over the 713 applications they received in 1983. The number of applicants admitted to the Department of EECS and the Engineering Science program from 1981 through 1987 varied from a low of 221 in 1981 to a high of 314 in 1985. The admission rates for Asian and Caucasian applicants during this period fall roughly into two ranges: from 1981 through 1983, admission rates ranged from 35.9 percent to 36.6 percent; from 1984 through 1987, admission rates ranged from 20.4 percent to 24.5 percent.

Not only has the number of Asian and Caucasian applicants to the Department of EECS and the Engineering Science program significantly increased, but, as indicated by AIS scores, applicants have also become more highly qualified during this period. For example, the average AIS of all applicants in 1981 was 5,683; the average AIS for 1987 applicants was 6,623, an increase of more than

900 points. In addition, in 1987, the Department of EECS and the Engineering Science program required a minimum AIS of 7,550 for applicants selected in Tier 1; also, in 1985 and 1986, the required AIS was among the highest required by any college or department on the Berkeley campus using AIS cutoffs.

During our study, we reviewed the admission rates of Asians and Caucasians applying to the Department of EECS and to the Engineering Science program between 1981 and 1987. In all seven years, the admission rates of Caucasians exceeded the admission rates of Asians. Below, we present a summary, by year, of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix D, which show the rates of admission within specific ranges of the AIS and which are the source of the admission data presented below.

- 1981. The admission rate of Caucasians was 3.0 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 377 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 270 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 100 points higher than the average AIS of Asians

offered admission; the median AIS of Caucasians offered admission was 155 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 241 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 245 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 194 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 160 points higher than the median AIS of Asians offered admission.

- 1982. The admission rate of Caucasians was 9.0 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 141 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 200 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 148 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered

admission was 30 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 116 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 70 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 2 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 10 points lower than the median AIS of Asians offered admission.

- 1983. The admission rate of Caucasians was 10.7 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 175 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 230 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 5 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 45 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 220 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 220 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 63 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 45 points lower than the median AIS of Asians offered admission.

- 1984. The admission rate of Caucasians was 4.1 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 68 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 90 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 36 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 65 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 136 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 110 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 58 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 70 points lower than the median AIS of Asians offered admission.

- 1985. The admission rate of Caucasians was 7.1 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 65 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 60 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 86 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 15 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 96 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 50 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 28 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was the same as the median AIS of Asians offered admission.

- 1986. The admission rate of Caucasians was 3.9 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 88 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 120 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 30 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 40 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 114 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 120 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 53 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 40 points higher than the median AIS of Asians offered admission.

- 1987. The admission rate of Caucasians was 2.2 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 32 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 5 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 79 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 25 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 55 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 30 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 16 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 25 points lower than the median AIS of Asians offered admission.

During our review, we identified two factors that we believed might account for some of the differences between the Asian and the Caucasian admission rates at the Department of EECS and the Engineering Science program: the admission of recruited athletes and the loss of protection for EOP applicants in 1984. We determined the effect of recruited athletes on the admission rates by recalculating the Asian and the Caucasian rates excluding recruited athletes. We determined that in all seven years, the changes in the admission rate differences between the recalculated and original rates were less than one percentage point.

We also determined that, if Asian and Caucasian EOP applicants had been admitted to the Department of EECS and Engineering Science program majors at the same rate in 1984 as in 1983, then the 4.1 percentage point difference in the overall admission rates for the

two groups (18.3 percent for Asians and 22.4 percent for Caucasians) would have been 2.0 percentage points--20.2 percentage points for Asians and 22.2 percentage points for Caucasians. This difference does not reflect the effect of the recruited athletes on admission statistics.

The only years for which the College of Engineering used "cutoff" academic index scores for the Department of EECS and the Engineering Science program were 1985, 1986, and 1987; in two of the three years, the Tier 1 admission rates of Caucasians were higher than the comparable rates of Asians. The Tier 2 admission rates of Caucasians were also higher than the admission rates of Asians in two of the three years.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the years in which the fewest and most applicants were affected by differences in admission rates. In 1981 the difference in admission rates between the two groups was 3 percentage points. If the admission rates had been the

same, of the 227 applicants who were admitted, four more Asians and four fewer Caucasians would have been admitted. Conversely, in 1985, the difference in admission rates between the two groups was 7.1 percentage points. If the admission rates had been the same, of the 314 applicants who were admitted, 23 more Asians and 23 fewer Caucasians would have been admitted.

The charts and tables on the following pages show the applications, admissions, and enrollments at the Department of EECS and the Engineering Science program between 1981 and 1987.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Since the prior year's total was 0 and the current year's total is greater than 0, the percent change cannot be expressed as a finite number.

\*\*\* Since we did not review 1981-1985 statistics for applicants declining to state their ethnic status or choosing "other" ethnic status, we did not calculate the percent change from the prior year.

\*\*\* Since we did not review data for 1980, we did not calculate the percent change from the prior year.

Departments and Programs in the  
College of Engineering Other Than  
EECS and Engineering Science

From 1981 through 1987, the number of Asian and Caucasian applicants to the departments and programs in the College of Engineering other than EECS and Engineering Science almost tripled, from 462 to 1,233. The most significant increase in the number of applicants occurred in 1986, when the UC began allowing applicants to select more than one UC campus on one application form. The departments and programs received 1,013 applications in this year, a 63.9 percent increase over the 618 applications they received in 1985. The number of applicants admitted to these departments and programs from 1981 through 1987 varied from a low of 244 in 1981 to a high of 390 in 1983. The admission rates for these departments and programs also varied during this period, from a low of 29.7 in 1987 to a high of 72.4 in 1983.

Not only has the number of Asian and Caucasian applicants to the Engineering departments and programs other than EECS and Engineering Science significantly increased, but the applicants, as indicated by AIS scores, have also become more highly qualified during this period. For example, the average AIS of all applicants to these departments and programs in 1981 was 5,767; the average AIS for 1987 applicants increased by more than 600 points to 6,433. In addition, in each of these six departments and two of the three programs, the AIS required of applicants selected in Tier 1 increased at least 100 points between 1985 and 1987.

During our study, we reviewed the admission rates of Asians and Caucasians who applied to the departments and programs in the College of Engineering other than EECS and Engineering Science from 1981 through 1987. In all seven years, the admission rates of Caucasians exceeded the admission rates of Asians. Below, we present a summary, by year, of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix E, which show the rates of admission within specific ranges of the AIS, and which are the basis for the admission rates discussed below.

- 1981. The admission rate of Caucasians was 1.8 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 374 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 210 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 255 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 145 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 259 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 325 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 193 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 145 points higher than the median AIS of Asians offered admission.

- 1982. The admission rate of Caucasians was 6.1 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 81 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 65 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 179 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 40 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 58 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was the same as the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 24 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 10 points higher than the median AIS of Asians offered admission.

- 1983. The admission rate of Caucasians was one percentage point higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 202 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 40 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 81 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 80 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 8 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 35 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 50 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 70 points lower than the median AIS of Asians offered admission.

- 1984. The admission rate of Caucasians was 15.5 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 360 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 260 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 94 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 30 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 181 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 150 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 9 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 40 points lower than the median AIS of Asians offered admission.

- 1985. The admission rate of Caucasians was 5.2 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 16 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 155 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 120 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was the same as the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 142 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 190 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 2 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 20 points higher than the median AIS of Asians offered admission.

- 1986. The admission rate of Caucasians was 5.0 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 99 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 40 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 95 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 120 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 53 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 40 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 86 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 120 points lower than the median AIS of Asians offered admission.

- 1987. The admission rate of Caucasians was 2.8 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 164 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 45 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 70 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 90 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 50 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was the same as the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 46 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 90 points lower than the median AIS of Asians offered admission.

During our review, we identified two factors that we believed might account for some of the differences between the Asian and the Caucasian admission rates at the departments and programs other than EECS and Engineering Science in the College of Engineering: the admission of recruited athletes and the loss of protection for EOP applicants in 1984. We determined the effect of recruited athletes on the admission rates by recalculating the Asian and the Caucasian rates excluding recruited athletes. We determined that, in all years, the changes in the admission rate differences between the recalculated and the original rates were less than one percentage point.

We also determined that, if Asian and Caucasian EOP applicants had been admitted to the departments and programs in the College of Engineering other than EECS and Engineering Science within the College of Engineering at the same rate in 1984 as they were in 1983, then the

15.5 percentage point difference in the overall 1984 admission rates of the two groups (40.4 percent for Asians and 55.9 percent for Caucasians) would have been 9.5 percentage points--46.9 percent for Asians and 56.4 percent for Caucasians. This difference does not reflect the effect of the recruited athletes on admission statistics.

For 1985, 1986, and 1987, the only years for which the College of Engineering used the academic index cutoff scores for the departments and programs in this college other than EECS and Engineering Science, the Tier 1 admission rates of Asians were higher than the admission rates of Caucasians in all years; conversely, the Tier 2 admission rates of Caucasians were higher than the Asian admission rates in all three years.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the year in which the fewest and most applicants were affected by the differences in admission rates. In 1983, the difference in admission rates between the two groups was 1.0 percentage point; if the admission rates had

been the same, of the 390 applicants who were admitted, one more Asian and one less Caucasian would have been admitted. Conversely, in 1984, the difference in admission rates between the two groups was 15.5 percentage points. If the admission rates had been the same, of the 326 applicants who were admitted, 22 more Asians and 22 fewer Caucasians would have been admitted.

The charts and tables on the following pages show the applications, admissions, and enrollments at the College of Engineering in departments and programs other than EECS and Engineering Science between 1981 and 1987.

## COLLEGE OF NATURAL RESOURCES

According to the assistant director of the OAR Admissions Division, the College of Natural Resources did not become oversubscribed until the fall semester of 1986, and the admissions-related statistics for this college reflect this fact. For example, as late as 1985, the admission rate for all Asian and Caucasian applicants to this college was 90 percent.

From 1981 through 1987, the number of Asian and Caucasian applicants to the College of Natural Resources increased almost sixfold, from 109 to 741. The most significant increase in the number of these applicants occurred between 1986 and 1987; the 741 applications the college received in 1987 represented a 163.7 percent increase over the 281 applications it received in 1986. The number of Asian and Caucasian applicants admitted to the college from 1981 through 1987 increased in every year except 1985 and varied from a low of 88 in 1981 to a high of 255 in 1987. The Asian and Caucasian admission rates for this college also varied during this period: the lowest admission rate occurred in 1987, when 34.4 percent of these applicants were offered admission, and the highest admission rate occurred in 1984, when 92 percent of the applicants were offered admission.

Not only has the number of Asian and Caucasian applicants to the College of Natural Resources significantly increased, but these

applicants, as indicated by AIS scores, have also become more highly qualified during this period. For example, the average AIS of Asian and Caucasian applicants to the college in 1981 was 5,320; the average AIS for 1987 applicants was 5,951, an increase of more than 600 points.

During our study, we reviewed the admission rates of Asians and Caucasians applying to the College of Natural Resources from 1981 through 1987. In 1986 and 1987, years when the college was oversubscribed, the admission rates of Caucasians were higher than those of Asians. Below we present a summary, by year, of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix F, which show the rates of admission within specific ranges of the AIS and which are the source of the admission data presented below.

- 1981 through 1985. This college was not oversubscribed. From 1981 through 1985, the admission rate for Caucasian applicants was at least 80.0 percent, and the admission rate for Asian applicants was at least 78.6 percent.
- 1986. The admission rate of Caucasians was 11.1 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all

Caucasian applicants was 88 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 65 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 142 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 150 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 13 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 85 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 103 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 140 points lower than the median AIS of Asians offered admission.

- 1987. The admission rate of Caucasians was 10.0 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 36 points higher than the average AIS

of all Asian applicants; the median AIS of all Caucasian applicants was 55 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 155 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 15 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 60 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 45 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 26 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 5 points lower than the median AIS of Asians offered admission.

During our review, we identified one factor that we believed might account for some of the differences between the Asian and the Caucasian admission rates in 1986 and 1987 at the College of Natural Resources: the admission of recruited athletes. We determined the effect of recruited athletes on the admission rates by recalculating the Asian and the Caucasian rates excluding recruited athletes. We determined that in both years the changes in the admission rate

difference between the recalculated rates were less than one percentage point.

The College of Natural Resources was oversubscribed in 1986 and 1987. For 1987, the only year in which this college used Academic Index "cutoff" scores, both the Tier 1 and Tier 2 admission rates of Caucasians were higher than the admission rates of Asians.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the years in which the fewest and the most applicants were affected by the differences in admission rates. In 1985, the difference in admission rates between the two groups was 0.3 percentage points. If the admission rates had been the same, of the 189 applicants who were admitted, the same number of Asians and Caucasians would have been admitted. Conversely, in 1987, the difference in admission rates between the two groups was 10.0 percentage points. If the admission rates had been the same, of the 255 applicants who were admitted, 13 more Asians and 13 fewer Caucasians would have been admitted.

The charts and tables on the following pages depict the applications, admissions, and enrollments at the College of Natural Resources between 1981 and 1987.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Since the prior year's total was 0 and the current year's total is greater than 0, the percent change cannot be expressed as a finite number.

\*\*\* Since we did not review data for 1980, we did not calculate the percent change from the prior year.

## COLLEGE OF CHEMISTRY

The College of Chemistry has two departments: the Department of Chemistry and the Department of Chemical Engineering. According to the associate dean, the Department of Chemical Engineering was oversubscribed for all years from 1981 to 1987; however, the Department of Chemistry was not oversubscribed until the fall of 1987. Therefore, it was more difficult to gain admission to the Department of Chemical Engineering in 1981 through 1986 than it was to the Department of Chemistry. This fact is reflected in the much lower admission rates in the former department. To avoid presenting potentially misleading statistics for the College of Chemistry, we isolated the statistics for each of the departments in the college and report them separately.

### Department of Chemistry

Between 1981 and 1987, the number of Asian and Caucasian applicants to the Department of Chemistry quadrupled, from 45 to 180. The most significant increase in the number of applicants occurred in 1987; the 180 applications the department received represented a 119.5 percent increase over the 82 applications it received in 1986. The number of applicants admitted to the department from 1981 through 1987 varied from a low of 39 in 1981 to a high of 132 in 1987. The admission rates for this department also varied during this period, from a low of 73.3 percent in 1987 to a high of 95.3 percent in 1985.

Not only has the number of Asian and Caucasian applicants to the Department of Chemistry significantly increased, but the applicants, as indicated by AIS scores, have also become more highly qualified during this period. For example, the average AIS of all applicants to the Department of Chemistry in 1981 was 6,185; the average AIS for 1987 applicants was 6,317, representing an increase of more than 100 points.

During our study, we reviewed the admission rates of Asians and Caucasians applying to the Department of Chemistry from 1981 through 1987. In 1987, the only year in which the department was oversubscribed, Caucasians had a higher admission rate than Asians. Below, we present a summary of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix H, which show the rates of admission within specific ranges of the AIS and which are the source of the admissions data presented below.

- 1981 through 1986. This department was not oversubscribed. During this period, the minimum admission rate of Caucasians was 86.2 percent, and the minimum admission rate of Asians was 82.4 percent.
- 1987. The admission rate of Caucasians was 30.7 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 128 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 400 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 140 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 20 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 330 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 445 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 28 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 40 points higher than the median AIS of Asians offered admission.

We considered factors that might account for some of the difference in the admission rates of Asians and Caucasians in 1987. First, we determined the approximate admission rates for fall 1987 of Asians and Caucasians by Tier: in Tier 1, both Asians and Caucasians

had 100 percent admission rates; in Tier 2, Caucasians had an 82.3 percent admission rate, and Asians had a 45.6 percent admission rate. We also considered whether the residency status of applicants affected the admission rates of Caucasians and Asians because, in 1985, the former dean of the College of Chemistry used two cutoff scores, one for residents and one for nonresidents. We found that the residency status of applicants had only a marginal effect on the difference in admission rates.

During our review, we identified one factor that we believed might account for some of the differences between the Asian and the Caucasian admission rates at the Department of Chemistry in 1987: the admission of recruited athletes. We determined the effect of recruited athletes on the admission rates by recalculating the Asian and the Caucasian rates excluding recruited athletes. We determined that in 1987, the change in the admission rate differences between the recalculated and the original rates was less than one percentage point.

According to the dean of the College of Chemistry, the reason why Caucasians had a higher admission rate in 1987 was that Berkeley offered admission to a significantly larger number of Caucasian applicants who did not submit all officially required grades and test scores than it did to Asians who did not submit all these data. According to the dean, in the review of official and self-reported information, the Caucasians were found to be the more qualified applicants; the scholastic qualifications of the 14 admitted Caucasian

applicants, as indicated by AIS, were higher than portrayed in this report. We are unable to verify this information.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the year in which the fewest and most applicants were affected by the difference in admission rates. In 1986, the difference in admission rates between the two groups was 0.7 percentage points. If the admission rates had been the same, of the 77 applicants who were admitted, the original number of Asians and Caucasians would have been admitted. Conversely, in 1987, the difference in admission rates between the two groups was 30.7 percentage points. If the admission rates had been the same, of the 132 applicants who were admitted, 14 more Asians and 14 fewer Caucasians would have been admitted.

The charts and tables on the following pages show the applications, admissions, and enrollments at the Department of Chemistry between 1981 and 1987.

## Department of Chemical Engineering

From 1981 through 1987, the number of Asian and Caucasian applicants to the Department of Chemical Engineering increased by 52.6 percent, from 114 to 174. The most significant increase in the number of applicants occurred in 1986, when the UC began allowing applicants to select more than one UC campus on the application form. The 199 applications the department received in this year represented a 48.5 percent increase over the 134 applications it received in 1985. The number of applicants admitted to this department from 1981 through 1987 varied from a low of 60 in 1984 to a high of 118 in 1987. The admission rates for this department also varied during this period, from a low of 37.2 percent in 1986 to a high of 67.8 percent in 1987.

Not only has the number of Asian and Caucasian applicants to the Department of Chemical Engineering significantly increased, but the applicants, as indicated by AIS scores, have also become more highly qualified during this period. For example, the average AIS of all applicants to this department in 1981 was 5,970; the average AIS for 1987 applicants was 6,619, representing an increase of more than 600 points.

In our study, we reviewed the admission rates of Asian and Caucasian applicants to the Department of Chemical Engineering for the fall terms from 1981 through 1987. In four of the seven years, the admission rate of Asians was higher than that of Caucasians. Below, we

present a summary, by year, of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix G, which show the rates of admission within specific ranges of the AIS, and which are the source of the admission data presented below.

- 1981. The admission rate of Caucasians was 5.2 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 935 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 270 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 166 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 785 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 292 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 410 points higher than the median AIS of all Asian applicants.

The average AIS of Caucasians offered admission was 123 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 180 points higher than the median AIS of Asians offered admission.

- 1982. The admission rate of Caucasians was 4.6 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 148 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 80 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 236 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 75 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 130 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 50 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 83 points

higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 145 points higher than the median AIS of Asians offered admission.

- 1983. The admission rate of Caucasians was 9.9 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 109 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 200 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 115 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 95 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 86 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 40 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 77 points higher than the average AIS of Asians offered admission; the

median AIS of Caucasians offered admission was 5 points lower than the median AIS of Asians offered admission.

- 1984. The admission rate of Asians was 6.7 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 309 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 170 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 44 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 65 points lower than the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 161 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 125 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 147 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 70 points lower than the median AIS of Caucasians offered admission.

- 1985. The admission rate of Asians was 4.8 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 203 points higher than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 100 points higher than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 137 points higher than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 85 points higher than the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 111 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 40 points higher than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 44 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 70 points higher than the median AIS of Caucasians offered admission.

- 1986. The admission rate of Asians was 6.0 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 4 points higher than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 85 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 13 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 10 points lower than the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 89 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 145 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 13 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 10 points lower than the median AIS of Caucasians offered admission.

- 1987. The admission rate of Asians was 0.7 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 10 points higher than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was the same as the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 55 points higher than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was the same as the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 118 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 50 points lower than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 19 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 35 points lower than the median AIS of Caucasians offered admission.

During our review, we identified factors that might account for some of the differences in admission rates in the years with the largest rate differentials, 1983 and 1984; the admission rate of Caucasians was higher by 9.9 percentage points in 1983, and the admission rate of Asians was higher by 6.7 percentage points in 1984. One factor we considered was the residency of the applicants because, according to the associate director of the Admissions Division, in 1985 the former dean of the College of Chemistry used two cutoff scores, one for residents and one for nonresidents. We determined the admission rates of Asian and Caucasian applicants who were considered California residents for admission purposes and the rates for those who were nonresidents. We found that, for 1983 and 1984, the residency status of applicants had little effect on the differences in admission rates between Asians and Caucasians.

We also identified two other factors that we believed might account for some of the differences between Asian and Caucasian admission rates at the Department of Chemical Engineering: the admission of recruited athletes and the loss of protection for EOP applicants in 1984. We determined the effect of recruited athletes on the admission rates by recalculating the Asian and the Caucasian rates excluding recruited athletes. We determined that in all years, the changes in the admission rate differences between the recalculated and the original rates were less than one percentage point.

We also determined that, if Asian and Caucasian EOP applicants had been admitted to the Department of Chemical Engineering at the same rate in 1984 as they were in 1983, then the 6.7 percentage point difference in the overall 1984 admission rates of the two groups (48.3 percent for Asians and 41.6 percent for Caucasians) would have been 11.8 percentage points--53.4 percent for Asians and 41.6 percent for Caucasians. This difference does not reflect the effect of recruited athletes on admission statistics.

In 1987, the only year for which the College of Chemistry used AIS cutoff scores for the Department of Chemical Engineering, the Tier 1 admission rate for Caucasians was 95.3 percent, and for Asians it was 100 percent; in Tier 2, Caucasians had a 50.0 percent admission rate, and Asians had a 47.4 percent admission rate.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the years in which the fewest and most applicants were affected by the differences in admission rates. In 1987, the difference in admission rates between

the two groups was 0.7 percentage points. If the admission rates had been the same, of the 118 applicants who were admitted, the original number of Asians and Caucasians would have been admitted. Conversely, in 1983, the difference in admission rates between the two groups was 9.7 percentage points. If the admission rates had been the same, of the 92 applicants who were admitted, 3 more Asians and 3 fewer Caucasians would have been admitted.

The charts and tables on the following pages depict the applications, admissions, and enrollments at the Department of Chemical Engineering between 1981 and 1987.

## COLLEGE OF ENVIRONMENTAL DESIGN

From 1981 through 1987, the number of Asian and Caucasian applicants to the College of Environmental Design doubled, from 216 to 432. The most significant increase in the number of applicants occurred in 1986, when the UC began allowing applicants to select more than one UC campus on one application form. The college received 402 applications, a 65 percent increase over the 243 applications it received in 1985. The number of Asian and Caucasian applicants admitted to the college from 1981 through 1987 varied from a low of 57 in 1981 to a high of 205 in 1987. The admission rates for this college also varied during this period: the lowest admission rate occurred in 1986, when 24.4 percent of the applicants were offered admission, and the highest admission rate occurred in 1984, when 50.8 percent of the applicants were offered admission.

Not only has the number of Asian and Caucasian applicants to the College of Environmental Design significantly increased, but the applicants, as indicated by AIS scores, have also become more highly qualified during this period. For example, the average AIS of Asian and Caucasian applicants to the college in 1981 was 5,192; the average AIS for 1987 applicants increased by more than 700 points to 5,952. In addition, in 1985, the college required an AIS of 6,630 for applicants selected in Tier 1; in 1987, the required AIS increased by almost 300 points to 6,920.

During our study, we reviewed the admission rates of Asians and Caucasians applying to the College of Environmental Design from 1981 through 1987. In six of the seven years, the admission rates of Caucasians exceeded the admission rates of Asians. Below we present a summary, by year, of the data we reviewed. Before readers draw conclusions regarding the comparative admission rates of Asians and Caucasians, they should review the tables in Appendix I, which show the rates of admission within specific ranges of the AIS and which are the source of the admission data presented below.

- 1981. The admission rate of Caucasians was 5.3 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 491 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 30 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 27 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 100 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following

statistics apply. The average AIS of all Caucasian applicants was 127 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 275 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 21 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 100 points lower than the median AIS of Asians offered admission.

- 1982. The admission rate of Caucasians was 1.5 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 51 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 130 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 51 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 60 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants

was 124 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 55 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 172 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 120 points higher than the median AIS of Asians offered admission.

- 1983. The admission rate of Caucasians was 13.1 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 472 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 400 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 180 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 80 points higher than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 290 points higher than the average AIS of all Asian

applicants; the median AIS of all Caucasian applicants was 200 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 118 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 100 points higher than the median AIS of Asians offered admission.

- 1984. The admission rate of Caucasians was 10.6 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 45 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 60 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 170 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 130 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 117 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 220

points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was one point higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 70 points lower than the median AIS of Asians offered admission.

- 1985. The admission rate of Asians was 1.1 percentage points higher than the admission rate of Caucasians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Asian applicants was 400 points higher than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 225 points higher than the median AIS of all Caucasian applicants. The average AIS of Asians offered admission was 62 points higher than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 20 points lower than the median AIS of Caucasians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Asian applicants was 188 points lower than the average AIS of all Caucasian applicants; the median AIS of all Asian applicants was 200 points lower than the median AIS of all Caucasian

applicants. The average AIS of Asians offered admission was 14 points lower than the average AIS of Caucasians offered admission; the median AIS of Asians offered admission was 30 points lower than the median AIS of Caucasians offered admission.

- 1986. The admission rate of Caucasians was 5.7 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 156 points lower than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 110 points lower than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 80 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 35 points lower than the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 10 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 70 points lower than the median AIS of all Asian applicants. The

average AIS of Caucasians offered admission was 103 points lower than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 10 points lower than the median AIS of Asians offered admission.

- 1987. The admission rate of Caucasians was 22.3 percentage points higher than the admission rate of Asians.

For all applicants who were considered for admission, whether or not they had complete AIS profiles, the average AIS of all Caucasian applicants was 116 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 130 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 80 points higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was the same as the median AIS of Asians offered admission.

If only applicants with complete AIS data are included in calculating the average and the median, the following statistics apply. The average AIS of all Caucasian applicants was 226 points higher than the average AIS of all Asian applicants; the median AIS of all Caucasian applicants was 255 points higher than the median AIS of all Asian applicants. The average AIS of Caucasians offered admission was 19 points

higher than the average AIS of Asians offered admission; the median AIS of Caucasians offered admission was 20 points higher than the median AIS of Asians offered admission.

During our review, we identified two factors that we believed might account for some of the differences between the Asian and the Caucasian admission rates at the College of Environmental Design: the admission of recruited athletes and the loss of protection for EOP applicants in 1984. We determined the effect of recruited athletes on the admission rates by recalculating the Asian and the Caucasian rates excluding recruited athletes. We determined that in all years except 1985, the changes in the admission rate differences between the recalculated and the original rates were less than one percentage point. In 1985, the overall admission rate of Asians was 1.1 percentage points higher than that of Caucasians. However, excluding the four recruited Caucasian athletes (there were no Asian recruited athletes), the recalculated rate for Asians was 2.5 percentage points higher than the recalculated rate for Caucasians.

We also determined that if Asian and Caucasian EOP applicants had been admitted to the College of Environmental Design at the same rate in 1984 as in 1983, then the 10.6 percentage point difference in the overall 1984 admission rates of the two groups (43.9 percent for Asians and 54.5 percent for Caucasians) would have been 5.3 percentage

points--50.0 percent for Asians and 55.3 percent for Caucasians. This difference does not reflect the effect of the recruited athletes on admission statistics.

For 1985, 1986, and 1987, the only years for which the College of Environmental Design used Academic Index "cutoff" scores, the Tier 1 admission rates of Caucasians were higher than the admission rates of Asians in all three years. The Tier 2 admission rates of Caucasians were higher than the admission rates of Asians in two of the three years.

Because not all of the selection criteria and documentation that Berkeley used in selecting applicants were available for us to review, and since our analysis did not consider the qualifications of the applicants offered admission or the effect on admission rates of applicants offered admission from protected categories, we could not determine what the admission rates for Asians and Caucasians should have been. However, to give readers an indication of how many Asians and Caucasians are represented by the differences in admission rates that we discussed in this section, we determined the years in which the fewest and the most applicants were affected by the differences in admission rates. In 1985, the difference in admission rates between the two groups was 1.1 percentage points. If the admission rates had been the same, of the 105 applicants who were admitted, one more Caucasian and one fewer Asian would have been admitted. Conversely, in 1987, the difference in admission rates between the two groups was

22.3 percentage points. If the admission rates had been the same, of the 205 applicants who were admitted, 21 more Asians and 21 fewer Caucasians would have been admitted.

The charts and tables on the following pages show the applications, admissions, and enrollments at the College of Environmental Design between 1981 and 1987.

## CONCLUSION

Since 1981, more applicants and more applicants with better qualifications have been seeking admission to the University of California at Berkeley. From 1981 through 1987, the total number of Asian and Caucasian applicants for Berkeley's approximately 3,600 available first-year spaces has increased by more than 100 percent. In addition, during this period, the average high school grade point average of Asian and Caucasian applicants increased from 3.25 to 3.65. Because of the significant increase in the number of applications, those colleges in high demand at Berkeley have adopted standards for selecting applicants that far exceed the minimum requirements of the UC. Consequently, it has become more difficult for applicants to Berkeley to gain admission to these colleges; this difficulty is reflected in the fact that, since 1981, admission rates at four of the five colleges have decreased.

From 1981 through 1987, the differences in admission rates between Asian and Caucasian first-year applicants to Berkeley's colleges, departments, and programs varied from less than one percentage point in six instances to 30.7 percentage points at the Department of Chemistry in 1987. Of the 49 Asian admission rates and the 49 Caucasian admission rates that we compared with each other, the Caucasian rates exceeded the Asian rates in 37 instances, and the Asian rates

exceeded the Caucasian rates in 12 instances. In 26 of the 49 comparisons of admission rates, the differences in rates were 5.0 percentage points or less.

We conducted this review under the authority vested in the Auditor General by Section 10500 et seq. of the California Government Code and according to generally accepted governmental auditing standards. We limited our review to those areas specified in the audit scope section of this report.

Respectfully submitted,

  
THOMAS W. HAYES  
Auditor General

Mr. Thomas W. Hayes  
Auditor General  
State of California  
660 J Street, Suite 300  
Sacramento, California 95814

Dear Mr. Hayes:

In President Gardner's absence and on his behalf, I enclose the final response of the Berkeley campus to your report entitled "A Review of First-Year Admissions of Asians and Caucasians at the University of California at Berkeley;" several changes have been made in the draft you received yesterday. The points made by Chancellor Heyman in his covering letter have my full and strong endorsement.

The University of California is committed to serving all Californians. We consider the public scrutiny of our admissions processes as both necessary and helpful in assuring that this commitment is met.

With best wishes,

Sincerely,

A handwritten signature in dark ink, appearing to read "W. Frazer".

OFFICE OF THE CHANCELLOR

BERKELEY, CALIFORNIA 94720

October 1, 1987

PRESIDENT DAVID P. GARDNER

Dear President Gardner:

I am pleased to send our response for inclusion in the Auditor General's report on Asian admissions. The Auditor General's report is helpful because it confirms our own internal analysis of this matter.

While there may be legitimate differences of opinion on the interpretation of statistics, there can be no disagreement on the need to take the necessary steps to ensure the total integration of our ethnically diverse student body. Berkeley has a long and distinguished record of providing educational opportunities for Asian students. They comprise 25% of our undergraduate student body. We have set up an Asian task force, chaired by Professor Yuan Lee, Chemistry, and Director Janice Koyama of the Moffitt Undergraduate Library, to ensure the full participation of our Asian students, faculty and staff in the life of our University. Similar efforts are underway for our Black and Hispanic students, faculty and staff.

We are succeeding in our efforts to recruit minority students to Berkeley. We are now faced with the challenge of making cultural diversity work in the best interest of all. To the extent that the Auditor General's report assists us in doing a better job in reaching that goal, I welcome it.

Sincerely,

A handwritten signature in dark ink, appearing to read "Ira Michael Heyman".  
Ira Michael Heyman  
Chancellor

#### UNIVERSITY OF CALIFORNIA BERKELEY RESPONSE

##### Summary

The question of most interest to the public in California is

Are Asian and Caucasian applicants with the same or similar qualifications admitted to the Berkeley campus of the University of California at the same rate?

While the Auditor General's Report on Asian and Caucasian Admissions at the University of California, Berkeley does not answer this question directly, the data presented in the report support what the Berkeley campus has asserted for some time:

- In the top 40% of the admissions pool (referred to as "Tier 1" in the Auditor General's report) Asian and Caucasian students with similar qualifications are admitted at the same rate.
- In the case of the remaining 60% of the admissions pool (referred to as "Tier 2" in the Report), the admissions process is more complicated, involving supplemental information on students.

The report confirms that use of supplemental criteria in the review of "Tier 2" applicants for the College of Letters and Science where over three-fourths of admissions decisions are made, does not adversely affect Asian students, as UC Berkeley has concluded. In the cases tested by the Auditor General, it was confirmed we awarded Asians slightly higher scores in the supplemental criteria.

The Auditor General's Report notes differences in admissions rates for Asian and Caucasian applicants in some instances. These differences do not take into account complete scores, special admissions groups, or include a review college by college, tier by tier based on the qualifications of the applicants. A detailed explanation of these points follows.

## THE ADMISSIONS PROCESS AT BERKELEY

The admissions process at UC Berkeley is comprehensive, designed to take into account many different factors. Underrepresented minority students, who are part of the University's Affirmative Action efforts, eg. Black, Chicano, Latino, Native American or Filipino are not included in the tables and narrative in the Auditor General's Report, nor are they included in this analysis. The remaining applicants admitted can be divided into three groups:

First, students are admitted based on their Academic Index Score (AIS) alone. (This is referred to in the report as Tier 1. See the Report for an explanation.) AIS cutoff scores are established in each school and college, depending on the number of students it is able to admit, and the number of applicants within certain ranges of scores. EVERY APPLICANT WITH THE CUTOFF SCORE, OR A HIGHER ONE, IS ADMITTED.

Applicants whose scores are below the cutoff (referred to in the report as Tier 2) are evaluated based on a combination of AIS and supplemental criteria. For example, in the College of Letters and Science and Natural Resources, the supplemental criteria consist of California residency, qualification for the Educational Opportunity Program, completion of four years of math or three years laboratory science, completion of four years of one language or two years each of two languages, exemption from the Subject A requirement, the fact that at least two honors courses were not offered by the high school during the student's junior year, and the student's essay (which is reviewed for special interests, skills, hardship and circumstances).

The AIS scores of a majority of Tier 2 applicants are within 300 points of each other (out of 8000 total possible points). If the students were admitted strictly on AIS scores, small differences of ten or fifteen points would determine admissions. This would not separate applicants in any meaningful way. Supplemental criteria allow us to select students in a way that rewards academic preparation, acknowledges California residency and ensures that our entering class has a diversity of talents.

The Auditor General's Report supports our conclusion that supplemental criteria in the College of Letters and Science, where over three-fourths of admissions decisions are made, do not adversely affect Asian students. Asians overall received slightly higher scores in the supplemental criteria in the cases reviewed by the Auditor General.

The third admissions group consists of the special admissions categories, including athletes, the disabled, rural students (beginning in 1987), students from high schools with non-standard grading systems, veterans, students with exceptionally high scores in either verbal or math, students with special talents, Chancellor's Inquiries, Principals' Choice, Veterans (before 1985), NROTC (before 1985), inter campus accelerated high school program and the Educational Opportunity Program (from 1981-1983). These applicants undergo a supplemental application review, if not evaluated in the Tier I or Tier II review. This review considers all the applicants' qualifications including special talents or circumstances. These students would not be admitted if we relied simply on the first two steps in the admissions process.

## TIER 1 IN THE AUDITOR GENERAL'S REPORT

The Auditor General's Report divided admissions into two groups, called Tier 1 and Tier 2. This division was based to some degree on the general admissions process as described above, although many of those in special admissions groups do not fall into either tier.

It is important not to think of special admissions groups as a subset of Tier 2. While often eligible for regular admission, these students frequently have scores lower than the scores for most Tier 2 students. It is also a fact that special admissions groups are predominantly Caucasian -- athletes, rural students in 1987, and the disabled for example. Admission rates for Tier 2 should exclude these groups; including them makes the admission rates higher for Caucasians. In fact, the campus admits this third group on very different criteria in accordance with approved University and campus policy.

## "INCOMPLETE DATA" AND THE ADMISSIONS PROCESS

The auditors used only computer (i.e. "official" scores from testing agencies) data for their report. If an applicant was missing a test score or a Grade Point Average (GPA), the applicant's AIS was calculated assigning a score of zero, or excluded from the analysis. However, when we consider students for admission to the professional schools, we examine not just the computer records, but the complete folder for each student, which includes the scores not available on the computer lists. This same process is followed for applicants who appeal denial of admission to the College of Letters and Science. Both our own analysis and that of the Auditor General have determined that Caucasian students are more apt than Asian students to have incomplete "official" data. In addition, many students whose computer scores or GPAs are incomplete in fact have very high scores. Therefore, to examine admission rates and then look at the AIS based on incomplete official data, as in the Report's Appendices, gives a misimpression about student qualifications. The incomplete data disproportionately pulls down the overall AIS of Caucasian students. When a student's folder is reviewed, and all information including self-reported scores are considered, the AIS rises. <sup>(1)</sup>\*

## THE "AIS" AS AN OVERALL MEASURE

Currently, approximately the top 40% of all students is admitted on the basis of AIS alone, while the remaining 60% is admitted based on a combination of AIS and other factors. Before 1985, Berkeley did not use the AIS to determine admissions. Therefore, the AIS comparisons do not reflect the basis of admission decisions from 1981 through 1984, (The Auditor General's Report acknowledges this point in the appendix on scope and limitations.) The AIS was also not the sole criteria in selecting the remaining 60% from 1985 - 1987.

Average and median AIS scores are used in the Report. For several technical reasons we feel average scores are misleading. With these particular data, the average is routinely too low as an indicator of the midpoint, tending to underestimate the scores of Caucasians since they have more incomplete data. Any missing test score, or a missing GPA is given a value of zero when the AIS is calculated in the computer file. The median, which is the midpoint of a set of scores, is the better indicator.

\*The Auditor General's comments on specific points contained in this response appear on page 143.

## COMPARATIVE ADMISSIONS RATES

In its summary, the Report states that Caucasians were admitted at higher rates in 37 instances and Asians were admitted at higher rates in 12 cases. Again, these comparisons were not reached relying on AIS scores; nor were relative qualifications considered. However, when one considers both "Tiers" and the special admissions groups, as well as "incomplete" data (as detailed above), one can see that such a comparison of overall rates has no bearing at all on the issue of fairness. (2)

### A PROBLEM IN ANALYSIS

An apparently contradictory situation occurs quite commonly in admissions situations when students from two groups are admitted to several programs or to the same program through several doors. The groups can be admitted through each door at the same rate, but combining the rates seems to favor one group over the other and appears to suggest bias. Consider this example:

<u>Door 1</u> ("Tier 1")	<u>Group A</u>	<u>Group B</u>
Number of applicants	100	10
Number admitted	100	10
Admission rate	100%	100%

<u>Door 2</u> ("Tier 2")		
Number of applicants	400	90
Number admitted	40	9
Admission rate	10%	10%

<u>Combined</u>		
Number of applicants	500	100
Number admitted	140	19
Admission rate	28%	19%

This problem occurs in the Auditor's figures because the Report does not separate the data for each school or college into the three groups ("tiers") actually used in admission. The data for the College of Letters and Science at Berkeley in Fall 1986 illustrate the problem. (3)

College of Letters and Science Fall 1986

<u>Group</u>	<u>Caucasians</u>	<u>Asians</u>
<b>Tier 1</b>

Number admitted	568	201
Admission rate	9%	9%
<b>Special</b>		
Number of applicants	603	68
Number admitted	504	56
Admission rate	83%	82%
<b>Combined</b>		
Number of applicants	8722	3025
Number admitted	2759	846
Admission rate	32%	28%

Not all of the situations are so clear-cut, of course. Using the Auditor General's methodology, one would say that if Asians had been admitted at the same overall rate as the Caucasians (32%) there would be 121 more Asians and 121 fewer Caucasians. No other conclusion was possible given the scope and methodology limitations the Auditors used. However, we feel a much better understanding of our admissions process, and a fairer representation of the true situation, can be arrived at by looking in more detail at the three groups of applicants we described throughout this response. (4)

SUMMARY

The Auditor General's Report notes differences in admissions rates for Asian and Caucasian applicants in some instances. These differences do not take into account complete scores, special admissions groups, or include a review college by college, tier by tier based on the qualifications of the applicants.

WHAT IS BERKELEY DOING?

The Berkeley campus and the University of California are committed to equal opportunity and Affirmative Action goals and policies. We are dedicated to a fair, impartial, even-handed admissions policy and practice towards all applicants consistent with these aims. In response to community concern about our admissions practices we have taken the following steps:

1. Published our internal study on Asian Admissions in January of 1987. This report provided information on our enrollment and admissions policies, practices, and results, and publicized our admissions criteria. The Auditor General's Report confirmed the new freshman enrollment data, and Berkeley's study of the College of Letters and Science supplemental criteria. In the cases tested by the Auditor General, it was confirmed Asians were awarded slightly higher scores on the supplemental criteria.
2. Made no major changes in admissions policies since 1985 and plan none for the 1988 selection process.
3. Increased Asian representation on the Admissions and Enrollment Committee, composed of faculty and students. This committee oversees the entire admissions process on the Berkeley campus.
4. Appointed an Advisory Committee on Asian Affairs, with both campus and community representatives, to examine the experience of Asian students and make recommendations where improved services are needed. It will also look into Berkeley's record of appointing and promoting Asians on the faculty and staff, and recommend ways the campus can strengthen relationships with Asian communities. This committee includes campus and community representatives.
5. Appointed a Special Subcommittee on Admissions Practices, composed of faculty and students. This committee's specific task is to review the policies currently used in admissions and recommend appropriate changes. It will also review the findings in the Auditor General's Report, and recommend to the Chancellor appropriate campus responses regarding admissions policies and procedures, and recordkeeping. The committee has already met several times, including a meeting with the community-based Asian American Task Force.

**AUDITOR GENERAL'S COMMENTS TO  
THE UNIVERSITY OF CALIFORNIA'S RESPONSE**

- ① We did not exclude any applicants from our analysis, or assign any applicants a score of zero as Berkeley suggests. As stated on page 37 of our report, on the computer tapes we used to produce the statistics in this report, 83.5 percent of all applicants had complete AIS profiles and 93 percent of the applicants offered admission had complete AIS profiles. In determining the AIS of applicants, we did not assign any applicants a score of zero if they were missing a grade point average or a test score; instead, we used the grade point average, the best SAT scores, and the best Achievement Test scores that Berkeley's data base listed for each applicant. In Appendix J, we specify the average and median academic index scores for applicants with complete and incomplete AIS profiles; in Appendix J, we also specify the averages and medians just for applicants with complete AIS profiles.
- ② The admission rates in our report are totally accurate; we did not, within the scope of our audit, attempt to determine whether or not the admission rates were fair or unfair.
- ③ In most instances for which Berkeley was able to provide us with the AIS separating Tier 1 and Tier 2, the proportions of Caucasians to Asians were less than one-half of the proportions used in this hypothetical example. Therefore, we conclude that the hypothetical example does not accurately portray the number of Caucasians and Asians who apply to Berkeley.
- ④ Our audit scope was to compare the admission rates of Caucasians and Asians who were given no special consideration in the admissions process on the basis of their self-reported ethnic status. To eliminate the special admission categories would be inconsistent with the scope. Further, Berkeley has incorrectly applied our methodology in calculating the number of Asians and Caucasians affected by different admission rates. Using our methodology, we determined that of the 3,606 applicants who were admitted, 83 fewer Caucasians and 83 more Asians would have been admitted if their admission rates had been the same at the College of Letters and Science in the fall 1986 semester.

**A DETAILED DESCRIPTION  
OF THE SCOPE, METHODOLOGY,  
AND LIMITATIONS OF OUR REVIEW**

To review the admissions policies and procedures for first-year applicants to the University of California at Berkeley (Berkeley) from 1981 through 1987, we obtained written policies for the admission and selection of applicants from the University of California (UC), from Berkeley's Office of Admissions and Records (OAR), and from the College of Engineering; written policies and procedures for the College of Chemistry and the College of Environmental Design were not available. Since written documentation was not available for these two colleges, we interviewed officials in the OAR, and we interviewed past and present deans of the colleges to obtain descriptions of policies and procedures.

Although we describe Berkeley's admissions policies and procedures from 1981 through 1987, we could not fully test the admissions systems at Berkeley's colleges either for compliance with these policies and procedures or for the appropriateness of admissions decisions. We could not do so for 1981 through 1984 because Berkeley maintains undergraduate admission application folders only for currently enrolled students for those years. After two years elapse, Berkeley disposes of undergraduate application folders for all applicants not enrolled. Also, Berkeley had disposed of most computer printouts depicting comparative qualifications of individual applicants for these years. For 1985 and 1986, we could only partially test the admissions systems because Berkeley could provide few of the computer printouts on the comparative qualifications of individual applicants showing the basis for its admissions decisions. We did not test the systems for 1987 because, according to the assistant director of the Admissions Division, Berkeley had not made all of its fall 1987 admissions decisions by the conclusion of our audit fieldwork in July 1987.

As part of our audit work concerning Berkeley's policies and procedures for admissions, we also selected stratified random samples of 1985 and 1986 applicants who, according to the associate director of Berkeley's OAR, were evaluated for admission to the College of Letters and Science on the basis of scholastic plus "supplemental" criteria. We obtained the files for those applicants in our samples, reviewed their supplemental criteria scores, and developed sample statistics based on the results of our review.

To develop and analyze accurate statistics concerning applications, admissions, and enrollments and to determine the accuracy of the information about Asian admissions and enrollments in Berkeley's

January 1987 report, we obtained copies of Berkeley's computer tapes containing data on all applicants and on applicants offered admission for the 1981 through 1986 fall terms and, as of June 30, 1987, for the 1987 fall term. We also obtained computer tapes containing data on applicants enrolled at Berkeley from 1981 through 1986. These computer tapes contain applicant data taken from an automated data base that Berkeley used in making its admissions decisions during the admissions process each year from 1981 through 1987. Information about applicants to Berkeley is entered into the data base early in the admissions process and is continually updated throughout the process as new information, such as test scores, arrives at Berkeley.

We could test the accuracy of the data on these tapes only for 1985 and 1986 because, as stated previously, Berkeley did not retain all applicants' folders for the previous years. In addition, we did not verify the accuracy of the data on the 1987 tape we obtained because Berkeley had not made all of its fall 1987 admissions decisions by the conclusion of our audit fieldwork in July 1987.

To determine if the computer tapes contained the names of all applicants and enrollees for fall 1985 and fall 1986, we selected the file folders of 50 applicants and 50 enrollees for each year and for each computer tape and verified that the tapes contained all the selected applicants and enrollees. To determine the accuracy of the data on these computer tapes, we selected random samples of applicants and enrollees listed on the tapes (our maximum sample size was 220 per tape), obtained the applicants' and enrollees' file folders, compared application- and admissions-related data on the tape with data in the folders, and used a "stop or go" sampling technique based on a 95 percent level of confidence with an error rate of less than 5 percent. For the data that we could verify, except for the data in the "Decline to state" category on one of the two 1985 computer tapes, we found the application- and admissions-related data on the 1985 and 1986 computer tapes to be accurate to at least a 95 percent level of confidence with an error rate of less than 6 percent. We found that the data on the "Decline to state" and other ethnic categories on the 1986 computer tapes were accurate. This data was entered onto the tapes through the same process in 1986 and 1987; however, a different data entry process was used from 1981 through 1985. Consequently, we did not develop statistics for the "Decline to state" category for those years.

To verify the accuracy of the computer programming we used to produce the statistics in this report, we compared our statistics for the number of total applicants and applicants admitted in 1985 and 1986 and the number of applicants who enrolled in 1981 through 1986 with comparable statistics in various Berkeley reports. We found that the aggregate statistics by ethnic group that we produced from the computer tapes generally matched the statistics in these reports. Additionally, we found Berkeley's statistics in its January 1987 report for new freshmen applicants who enrolled for 1981, 1984, and 1986 to be generally accurate. In Appendix B, we present a table showing the number of new first-year applicants who enrolled in the fall semesters from 1981 through 1986.

After conducting these validation tests, we developed statistics on the applications and admissions of Asians and Caucasians for each year from 1981 through 1987 and on enrollments for each year from 1981 through 1986. We compiled these statistics by college, departments, groups of departments, or programs within a college, and by year. We also developed the same data on the "Decline to state" and "Other" categories for 1986 and 1987. The tables and charts depicting these statistics are in Appendices C through I. We did not attempt to analyze comparative admission rates by ethnic group for the Berkeley campus as a whole because some ethnic groups apply to different colleges and different majors within those colleges in proportionately greater numbers than other ethnic groups. Further, the admissions criteria of the colleges are different. Therefore, a comparison of admission rates would be misleading.

On some of the tables in Appendices C through I we underlined the AIS range that contained the cutoff score that separated Tier 1 from Tier 2; we could do this only for the colleges and the years for which Berkeley was able to provide us with cutoff scores. These cutoff lines show the approximate distribution of applicants in Tier 1 and Tier 2 since the specific cutoff score is within the AIS range immediately above the cutoff line. Consequently, any references in Chapter II of this report to Tier 1 and Tier 2 admission rates are based on approximate admission rates for the two tiers because the source of all the admission rates we discuss in Chapter II is the tables in Appendices C through I. In addition, because we present data in Appendices C through I by AIS range, the Tier 1 admission rates could include some applicants who were actually in Tier 2.

There are several features of Berkeley's admissions system that prevent us from completely analyzing statistics and drawing conclusions regarding the comparative academic qualifications of applicant groups and their relative admission rates. Until 1987, Berkeley did not record the dates that standardized tests were entered on the data base that we analyzed. Since many applicants took the tests more than once, the computer tapes contained as many as three complete sets of test scores for each applicant. When test scores arrived after Berkeley made most of its admissions decisions, the scores were recorded on the data base. Since these "late" test scores were included on the computer tapes we reviewed, when they were the best test scores for applicants, we used them in our calculations of the comparative scholastic qualifications and admission rates of applicants from different ethnic groups. However, since the dates were not recorded, we could not know whether the test scores we used were the same scores that Berkeley used when making its admissions decisions.

This uncertainty is especially significant to readers who review Appendices C through I. These readers will note that the admission rates for applicants with academic index scores above the cutoff scores are sometimes less than 100 percent, even though Berkeley's admission procedures specify that admission be offered to every applicant whose AIS is above the specified cutoff score.

According to the associate director of the Admissions Division, this apparent discrepancy results when Berkeley does not receive all of the applicants' required test scores by the time it has to make its admissions decisions. However, we could not test Berkeley's admissions decisions for compliance with its stated policy because, as we noted, the computer tapes we analyzed contained "late" test scores--scores that were recorded after the admissions decisions were made. However, in our review of the accuracy of the data on the computer tapes, we also reviewed Berkeley's admissions decisions for compliance with its admissions procedures when all relevant data were available. Although the number of decisions we could test was very small (18 cases out of a sample of 140), they all complied with Berkeley's stated practice; that is, Berkeley offered admission to all applicants whose test scores were above the cutoff score if the test scores had arrived before the date by which Berkeley had to make its admissions decisions.

Another factor limiting our review concerns Berkeley's review of scholastic and "supplemental" criteria for applicants selected in Tier 2. From 1981 through 1987, Berkeley did not record on any automated data base or computer tapes the points awarded applicants for the supplemental criteria. Consequently, in Appendices C through J, academic index scores reflect points for scholastic qualifications only; we could not add points for supplemental criteria when they were applied since the points were not recorded on the computer tapes. However, applicants' admission rates, which are based on Berkeley's admissions decisions, do reflect points for supplemental criteria.

In addition, in 1985, Berkeley began computing the Academic Index Score (AIS), the sum of an applicant's high school grade point average and two sets of test scores, to use in making its admissions decisions. Between 1981 and 1984, although Berkeley considered other criteria, Berkeley's primary selection criterion was an applicant's high school grade point average. Even though Berkeley did not compute academic index scores before 1985, to depict applicants' scholastic qualifications according to a common indicator, for Appendices C through J, we calculated academic index scores for all applicants before 1985.

Further, according to Berkeley officials, Berkeley offered admission to some applicants who had not submitted all officially required grades and test scores. The AIS of some applicants on the automated data base that Berkeley used in its admissions process does not include points for the applicants' high school grade point averages or standardized test scores; we refer to these applicants as applicants with incomplete AIS profiles. While the data in Appendices C through I accurately depict admission rates, the AIS values in these appendices do not necessarily always reflect the scholastic qualifications of the applicants.

On the computer tapes we reviewed and used to produce the statistics in this report, 83.5 percent of the applicants had complete AIS profiles and 93.0 percent of the applicants offered admission had complete AIS profiles. Of the Caucasian applicants, 18.2 percent had

incomplete AIS profiles; of the Asian applicants, 12.5 percent had incomplete AIS profiles, a difference of 5.7 percentage points. Of the Caucasian applicants offered admission, 8.0 percent had incomplete AIS profiles; of the Asian applicants offered admission, 4.3 percent had incomplete AIS profiles, a difference of 3.7 percentage points.

In Appendix J, we calculated the average AIS and the median AIS for all applicants and for all applicants offered admission. We used two sets of data to calculate the averages and medians. One set of data included the academic index scores of all applicants on the computer tapes we used. The second set of data included only the applicants with complete AIS profiles. The average AIS is equal to the sum of all academic index scores awarded applicants in each ethnic group, divided by the total number of applicants in that ethnic group. The median AIS is the score above which and below which one-half of the academic index scores fall.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Most applicants with an AIS above 6580 were admitted solely on the basis of scholastic criteria. Admissions below this line were based on the following criteria: "special action," "special categories," or a combination of scholastic and "supplemental" qualifications.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Most applicants with an AIS above 7450 were admitted solely on the basis of scholastic criteria. Admissions below this line were based on the following criteria: "special action," "special categories," or a combination of scholastic and "supplemental" qualifications.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Most applicants with an AIS above 7004 were admitted solely on the basis of scholastic criteria. Admissions below this line were based on the following criteria: "special action," "special categories," or a combination of scholastic and "supplemental" qualifications.

\* Enrollment data was not available by the conclusion of our audit fieldwork in July 1987.

\*\* Most applicants with an AIS above 6910 were admitted solely on the basis of scholastic criteria. Admissions below this line were based on the following criteria: "special action," "special categories," or a combination of scholastic and "supplemental" qualifications.

\* The enrollment rate equals the number of applicants enrolled divided by the number of applicants offered admission.

\*\* Most applicants with an AIS above 6850 were admitted solely on the basis of scholastic criteria. Admissions below this line were based on the following criteria: "special action," "special categories," or a combination of scholastic and "supplemental" qualifications.
